KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

I have at the most 2 plastic bottles per month. Wine Cask cardboard and cat Pouches cardboard 2 weekly. Empty cat Pouches don't know what this comes under.

Question 2: Food Waste Collection

No food waste collection - status quo.

I don't have food scraps maybe a couple of bits of potato peel kumera or parsnip peel. Pumpkin seeds once a month as 1 whole pumpkin lasts me a month.

Further comments

I have a Wheelie Bin with Envirowaste
Which is full of green waste and the vege peel I mentioned. I have bird Aviaries so once every 2 or 3 weeks I throw a small plastic bag with bird droppings in the bin. No glass. Are you saying the cost would be $134 extra per year. This means I still have to pay $166 per year for my green waste to be collected. Too expensive that would make collection $300 per year. Unaffordable if using your scheme you pay. If not using it should not be charged. Totally unfair. 2 plastic bottles and 2 pieces of cardboard fortnightly is a joke. Your scheme would be ok for a family. I live alone so waste is minimal.

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

I BELIVE MORE PEOPLE WILL RECYCLE WHEN IT IS COLLECTED FROM OUTSIDE THIER PROPERTY. THE PRICE IS AFORDABLE, LESS THAN THE COST OF DRIVING IT TO TOWN. RECYCLING IS A CHEAPER,CLEANER,AND A BETTER WAY FOWARD FOR WHANGANUI

Question 2: Food Waste Collection

Council provides kerbside food waste collection from 1 July 2024 through a targeted rate at an estimated cost of $61 per year(or $1.17 per week), per household

Further comments

ANY WASTE THAT CAN BE REPURPOSED IN ANY WAY MAKES FOR A CLEANER,GREENER WHANGANUI.

Submission method Online

KARAKA STREET PROPERTIES, GROUNDWATER DRAINAGE AND BERM CLEANUP

REF 0690H1338223326

I WOULD LIKE THE DISTRICT COUNCIL TO COME UP WITH A SOLUTION TO THE GROUND WATER PROBLEM FROM NUMBER 28 - 42 KARAKA STREET. OVER THE LAST 30 YEARS WE AS PROPERTY OWNERS AND IN ONE CASE A RENTER HAVE HAD TRUCK FULLS OF FILL ON OUR DRIVE WAYS AND SECTIONS. THE GROUND WATER WASHES TOP SOIL SHELLROCK ECT ON TO THE FOOT PATHS AND BERMS. IN PLACES THE FOOT PATH HAS BECOME UNPASSABLE AND A DANGER TO PEPESTRIANS.

Submission method Delivered

IN REPLY TO QUESTION 1 KERBSIDE RECYCLING

QUITE FRANKLY I'M NOT INTERESTED IN WHAT YOUR PREFERRED OPTION IS, AND ONLY GOES TO SHOW THAT YOU COME FROM A PREDERMINED POSITION.-

MY OPINION FOR WHAT ITS WORTH, IS THAT THE COUNCILLORS AND MANAGERS ALONG WITH WORKERS IN COUNCIL ALL GROW A BACKBONE & REVIEW THE ORIGINAL PLAN WHEN THEY FIRST GAVE AWAY THE RUBBISH COLLECTION TO A PRIVATE CONTRACTOR

THE FIRST COMPANY WAS WASTE MANAGEMENT.-

COUNCIL THEN STIPULATED THAT THEY WOULD PICK UP THE RUBBISH ALONG WITH RECYCLABLES!!

I TOOK THE TIME AT LAST SUBMISSION TO READ OUT A COUNCIL LETTER SENT OUT TO NEW RATEPAYERS, DATED 2003 "WELCOME TO YOUR NEW NEIGHBOURHOOD

DID COUNCILLORS NOT LISTEN TO WHAT WAS READ.-

WASTE MANAGEMENT AT THE TIME WERE TOLD THE WASTE PAPER WAS TO BE BUNDLED TOGETHER WITH STRING AND CARD BOARD WOULD BE COLLECTED

BLAH BLAH BLAH 'PLASTIC CONTAINERS, SOFT DRINK CONTAINERS

IN THE LETTER IN BOLD "NO STICKERS REQUIRED"

WE ALL KNOW WHAT HAPPENED THERE DONT WE.-

THEY JUST THREW THE LOT IN THE BACK AS RUBBISH.

THESE COMPANIES OBVIOUSLY CAN ALL MAKE A PROFIT BETWEEN THEM, HOW MANY 4-5 IS IT

SO LETS SET A STANDARD FOR SERVICE

THAT BEING COUNCIL WILL REQUIRE ALL CONTRACTORS TO OPERATE A RECYCLING SYSTEM.—

SO THAT THOSE PUTTING OUT RUBBISH SEPARATE RECYCLABLES AND ARE CHARGED ACCORDINGLY WHEN ITS PICKED UP.—

IT AT THIS POINT I MUST CONFRONT THE ELEPHANT IN THE ROOM, THAT BEING ROB VINSEN.—

HIS MISLEADING ARTICLE IN THE RIVERCITY PRESS UNDER COUNCIL BITS "WORKING TOWARDS A LOW WASTE FUTURE" 14-OCT-2021. IT STATES ALL WANGANUI'S 16,000 HOUSE HOLDS SHARING THE COST AND HAVING A RECYCLABLES SERVICE IS "ESTIMATED" (MY EMPHASIS) TO COST $70.00 PER ANNUM COMPARED WITH AN OPT IN SYSTEM THAT MAY ATTRACT 4000 HOUSE HOLDS AND A COST OF $450.00 PER ANNUM

WELL ROB WERE ALMOST THERE NOW AT YOUR "ESTIMATED" COST OF $134 AND YOU HAVENT HIT THE GROUND YET

THIS AD HOC APPROACH TO COSTING HAS TO STOP

EITHER ROB VINSEN KNEW THESE FIGURES WERE INACURATE AND NEEDS TO BE SENSURED FOR THIS, ESPECIALLY WHEN OTHER COUNCIL FIGURES FOR THE SAME WORK SHOWED HIS COSTING WAS WAY TO LOW.—

THEN THERE IS ROBS ASERTION THAT 33% OF HOUSEHOLD RUBBISH IS FOOD SCRAPS WHICH WAS CONFICTED BY STEWART HUTTONS ARTICLE IN WANGANUI CHRONICLE DATE 14-AUG-2021

STATED THAT FOOD WASTE MADE UP 8% OF LANDFILL DEPOSITS IN WANGANUI.—

THIS SEEM TO BE A MORE PROBABLE FIGURE THAN COUNCILLOR VINSENS STAB IT THE DARK.—

IT IS ALSO WORTH NOTING ROB VINSEN. IN THE SAME ARTICLE "IF A RATES FUNDED KERBSIDE RUBBISH COLLECTION WAS INTRODUCED IT WOULD BE ABOUT $160.00 PER HOUSEHOLD PER YEAR AND WE THINK THIS IS TOO COSTLY.—

WELL COUNCILLOR VINSEN YOUR LATEST $134.00 ESTIMATION ISN'T FAR OFF THAT UNAFFORDABLE FIGURE OF $160 PER ANNUM AND WE DONT YET KNOW THE "TRUE" COST OF THE RECYCLING SERVICE, AND WE'VE STILL GOT OUR RUBBISH!.—

IN CONCLUSION:

MY VIEW ON Q1 AND Q2 IS OPTION 2 ON BOTH.

AND (1) THAT COUNCIL BE PROACTIVE WITH THE CONTRACTORS WHO PICK UP KERBSIDE RUBBISH AND DICTATE THAT THE BEST WORK PRACTICES BE THAT THEY ARE TO RECYCLE WASTE PLASTICS, CARDBOARD ALUMINIUM ETC.—

OR (2) COUNCIL GETS RID OF THE PRIVATE CONTRACTORS AND RUNS BOTH SIDES OF RUBBISH/WASTE MINIMISATION ON USER PAYS.—

OR (3) LETS OUT A CONTRACT TO BE SOLE PROVIDER OF THE SERVICE TO PICK UP RUBBISH/RECYCLABLES — BUT ONLY AS A TARGETED USER PAYS SYSTEM.—

KEY ISSUES

Question 1: Kerbside recycling

Will be in the submission. Our comments are more cautionary and more so about financial impacts on seniors as a low income sector. I would like to appear in person if that is available on the day and we would like to comment also on the velodrome. We submitted on the latter last year.

Question 2: Food Waste Collection

AS above

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

See general comments

Question 2: Food Waste Collection

No food waste collection - status quo.

See general comments

Further comments

We also need to deal with this at the other end of the chain.
1) Encouragement to use our own gardens as a food source, harvested and shared when ready, would eliminate much waste. There is a growing emphasis on this in schools and indeed, worldwide.
I'm involved with a group of people keen to develop a local heritage garden/nursery site for, in part, such a purpose, as well as to educate our community in our natural and historical relationship with plants, and the benefits this relationship offers for a more sustainable, and healthy future. Such programmes need to run in tandem with the problem of manufactured waste.
2) This curbside waste policy is designed to deal with a problem that could be avoided, mitigated and paid for at point of manufacture. If implemented, I believe it should be funded by the industries that create the waste in the first place. Sure, the cost will be passed on to the consumer, but they would have more opportunity to avoid cost, by using their own waste mitigation practices, such as growing some of their own food, to avoid using packaging.

Letter To WDC re Traffic - 28-04-2022 - 14-26.pdf

Submission method Online

2A Karewa street
Castlecliff,
Whanganui
4501

24th April, 2022

Whanganui District Council
101 Guyton Street, Whanganui 4500

To Mayor Hamish McDouall,

I am writing this letter on behalf of a number of concerned Castlecliff residents of Seafront Road, Karaka Street and Karewa Street, listed on the following pages. We would like to bring to the Council's attention our concerns regarding the extremely unsafe entry to our Castlecliff playground at Castlecliff reserve via the Seafront Road entrance.

The Castlecliff playground offers numerous great facilities all in one area. It has an extensive skate park and playground equipment including a flying fox, a basketball court and public barbecue facilities and toilets. The playground is therefore very popular and is frequented by many local children and also families who drive specifically to our area for it.

The playground is in a central location in Castlecliff, within easy walking, scootering and biking distance for our local children. Therefore a large number of Castlecliff children (possibly upwards of 70% of them) come to the playground unaccompanied and unsupervised. We residents have observed that a number of these unaccompanied children could be as young as five or under.

The majority of local children enter the playground via the driveway to the car park on Seafront Road. This is the quickest and most logical entrance for our children, not the entrance by the toilet on Rangiora Street. Therefore, children crossing Seafront Road to and from the playground, will often just

step onto the road without looking. And they are also obscured from cars turning into the driveway by the shrubbery on either side of the driveway entrance, especially the very small, younger children.

Seafront Rd from the Karaka stream end to the Rangiora Street intersection, is an unimpeded straight of 500 metres. It is therefore often used as a drag strip by cars and motorbikes. Because of Castlecliff's distance from the city centre, anyone wanting to race their vehicles on Seafront Road know they have a good 10 minutes before the police are able to arrive.

Combine unaccompanied, often very young children (with little or non-existent traffic sense) with a road that is frequently used as a drag strip, and you have an extremely dangerous if not potentially lethal public area. We residents believe a simple solution to this problem would be a judder bar either side of the driveway on Seafront Road. This would slow the traffic enough so that if a child stepped out on to the road, a car or motorbike would potentially have time to stop.

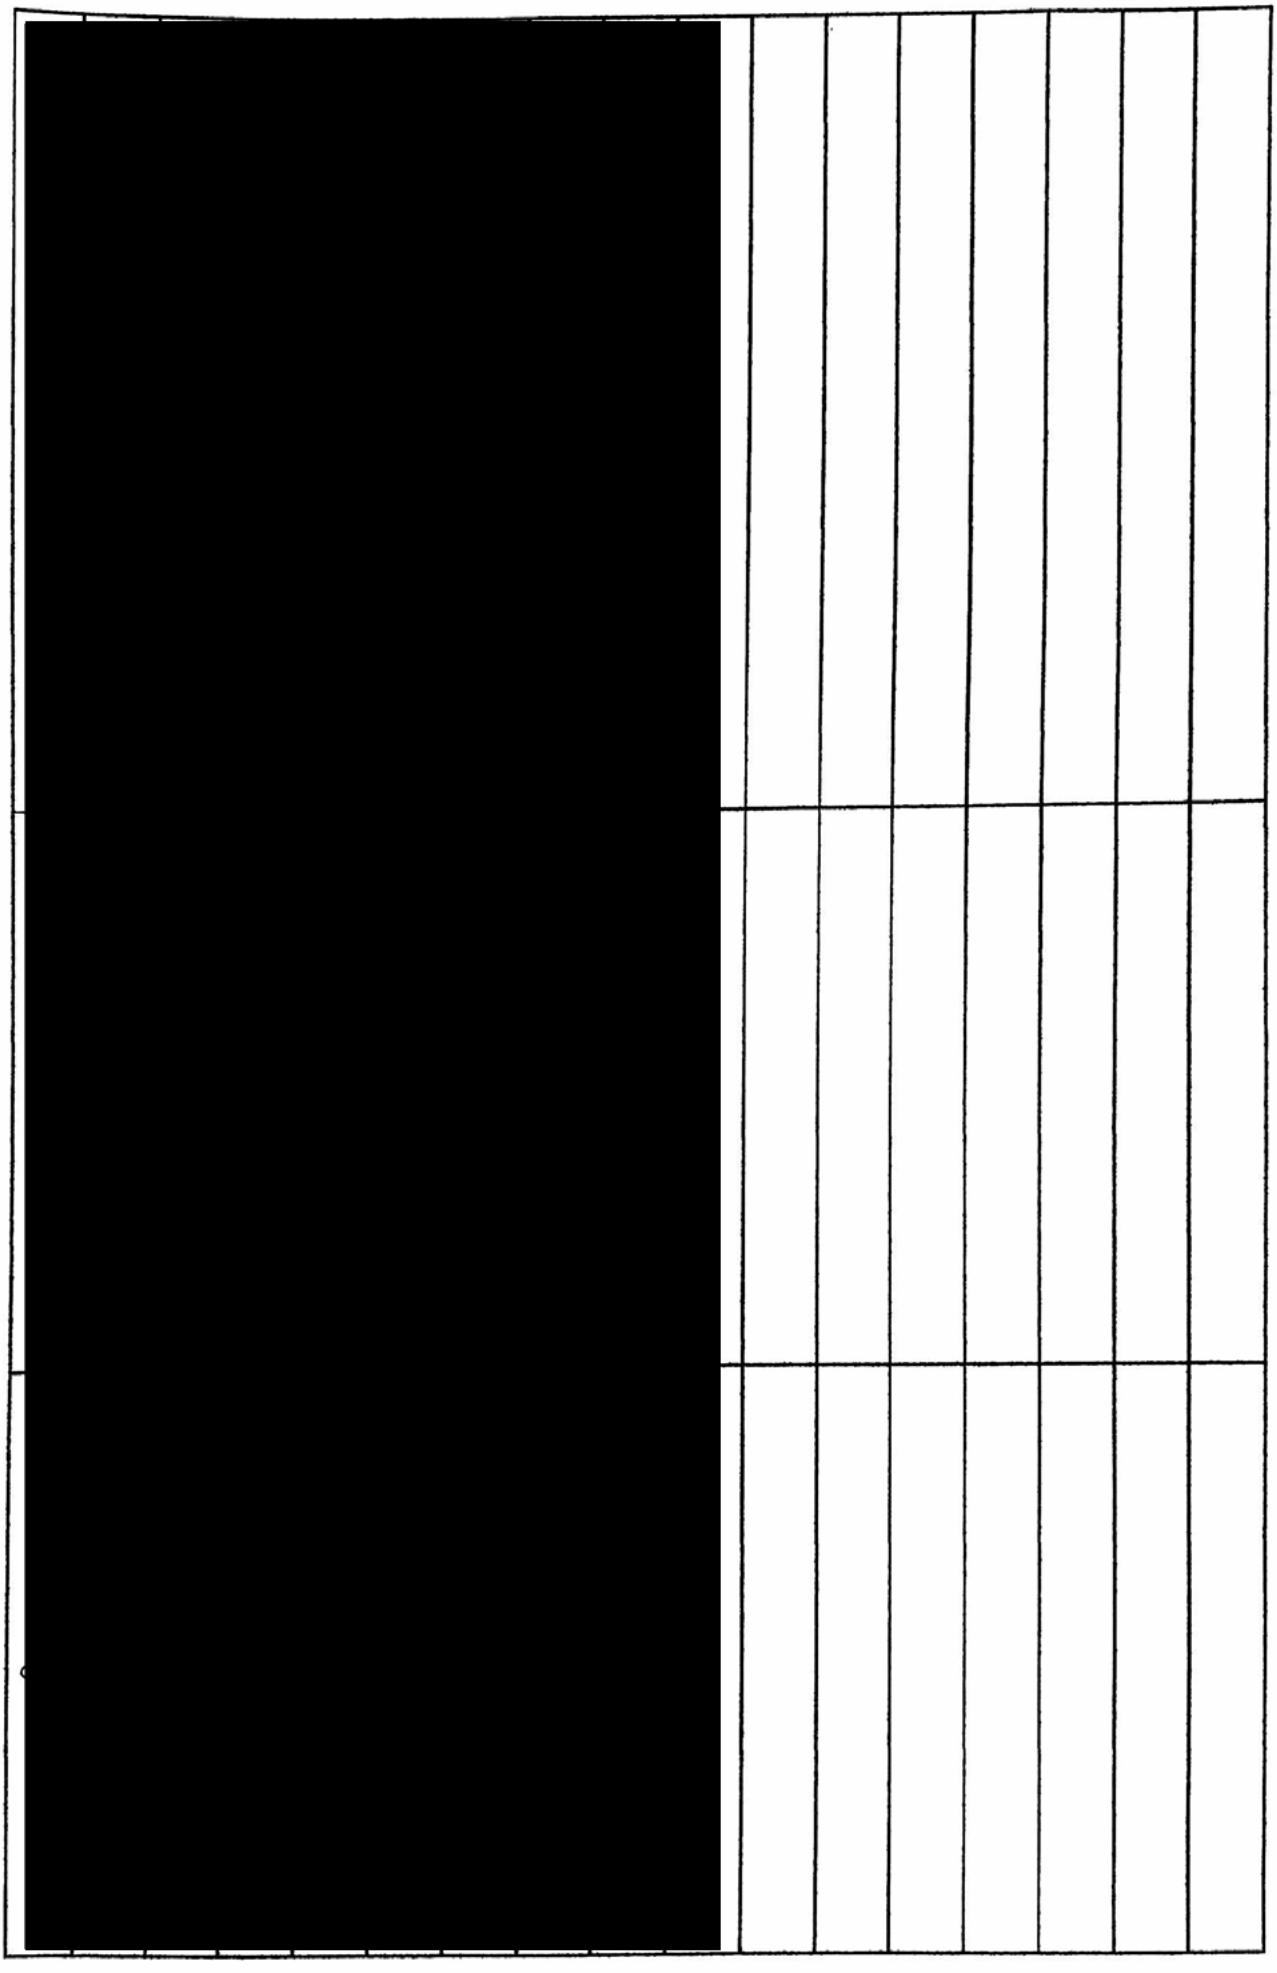
Thank you for your time and consideration of this urgent public road safety issue.

Best regards,

P.P. Geordie Laird

Geordie Laird

Name	Address	Signature
[redacted]		



We are the owners of 'Monday' Historic Seaside Cottage which is directly located across from the main entrance to the park on Seafront Road. The village is a holiday let and our beach retreat.

We have also been concerned about the safety aspect of the Seafront Rd Park entrance. Many of our visitors have witnessed reckless driving in cars and on motorcycles passed the park entrance with no apparent regard for children crossing from the North End. Several near fatal accidents have been witnessed. It was only yesterday we witnessed 3 young children on scooters crossing and two motorcyclists accelerating from the Rangiora crossing. They apparently did not even see the children so there must have been a blind spot as they came over a small rise in the road.

We thoroughly endorse the recommendation of Mr Laird regarding * judder bars to avoid any future major fatalities. * Also gates installed + locked at night

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

Benefits of Recycling

- Reduces the amount of waste sent to landfills and incinerators.
- Conserves natural resources such as timber, water, and minerals.
- Increases economic security by tapping a domestic source of materials.
- Prevents pollution by reducing the need to collect new raw materials.
- Saves energy.
- A lines with Council's waste aspirations.

The Benefits of Community Recycling.indd (zerowaste.co.nz)

Question 2: Food Waste Collection

Council provides kerbside food waste collection from 1 July 2024 through a targeted rate at an estimated cost of $61 per year(or $1.17 per week), per household

Benefits of Food Waste Collection

Reduces methane emissions from landfills and lowers your carbon footprint. Conserves energy and resources, preventing pollution involved in the growing, manufacturing, transporting, and selling food (not to mention hauling the food waste and then putting it in the landfill).

Organisation: Mainstreet Whanganui

Presentation of submissions:

Would you like to speak in support of your submission at a hearing – **Yes**

Yes, we would like to be involved in future consultation

Mainstreet Whanganui supports options one for kerbside recycling and food waste collection. We also comment and recommend that there be greater investment in CBD maintenance funding from general rates. We support the capital expenditure planned for 2021/22 for the Oriental Toilets in Victoria Ave and we support a review and upgrade of the current CCTV camera and their operations.

We make these comments and recommendations from feedback from members and engagement from our operational team. Mainstreet has employees working in the CBD from 3.00am to 6pm everyday of the year, our business promotions team engages with business and building owners regularly.

We look forward to engaging with councillors at the hearing, any question prior please contact myself Des Warahi General Manager.
On behalf of the Mainstreet Whanganui Board

Mainstreet Whanganui

Mainstreet Whanganui is a not-for-profit town centre management organisation representing the Whanganui CBD. We work to promote local businesses and make our central city as vibrant and attractive as possible.

We were established in 1991, a time when Whanganui's CBD had grown increasingly tired and was in serious economic decline. 30 years on, the economic outlook has vastly improved, and perceptions of our city have changed significantly - with Whanganui regularly topping the list as New Zealand's most beautiful city.

From our outset, Mainstreet has been a catalyst for change in Whanganui, both as an advocacy group supporting local businesses, and as a grassroots organisation, carrying out beautification works and managing events in the central city.

Our Remit Area - Mainstreet is responsible for looking after the eight blocks along Victoria Avenue, between Taupo Quay and Ingestre Street - the heart of Whanganui's Central Business District.

General comments and feedback:

This submission is presented on behalf of Mainstreet Whanganui and its members. The submission is authorised by the elected Mainstreet Whanganui Board. The Board has delegated the Mainstreet Whanganui Board Chairperson Christina Emery to speak in support of the submission at the hearing.

1. Central Business District services - CBD maintenance:

   We support a greater (increased) investment in CBD maintenance funding from general rates.

   Reason: The current and previous CBD maintenance funding contract have remained reasonably static over the last five years and do not reflect increase costs of goods, services, and employment. We support that our CBD cleanness and maintenances remain at its current high levels. We note that the WDC goals include such phrases as “providing a vibrant cdb space” and “maintaining services and facilities to a high level.” These goals are not consistent with the funding which has not increased at the level of cost increases. Our organisation is

currently having to reduce services provided (such as not maintaining the lights in the trees in the CBD), due to this decline in real funding levels.

The Whanganui CBD is recognised as an asset to Whanganui and its district with businesses and events bringing locals and visitor spending into the district. The CBD is recognised for its heritage and high level of attractiveness and beauty. Councils increase investment showcases the areas vibrancy and contributes to the positive image of Whanganui city and district.

In 2019 Whanganui was the winner of the most beautiful city and best street Ridgway Street and in 2020 best small city awarded by Keep New Zealand Beautiful. Mainstreet - Mainstreet Whanganui | Explore Aotearoa's most beautiful little city!

We support the Central Business District service indicative rate forecasted in the 2021 – 2023 WDC long term Plan volume 1. We do not support any increase to the level of the CBD rate as the CBD businesses are working through significant financial challenges during COVID – 19. We also expect that the total capital value of the CBD area will have increased since the last valuation, providing a defacto increase.

2. Oriental Toilets– we support the capital expenditure planned for 2021/22 of the Oriental Toilets in Victoria Ave.

Reasons: The toilet facility is opened 365 days a year and high demand from locals and visitors. The toilets are Whanganui premium toilet facility located in the Victoria Ave. The toilets are at a stage where maintenances and repairs are increasing and need updating. The toilets are in a key location for visitors and contribute to the positive image of Whanganui.

3. CCTV cameras in the Whanganui CBD. We support a review and upgrade of the current CCTV camera and their operations.

   Reasons: The current camera have been in place for several years and in the long-term plan volume 2, reports that “Ageing gear and fibre/infrastructure not being replaced in a timely manner has the potential consequences the CCTV network would no longer work efficiently.

   The Benefits of CCTV for Businesses are:

- Deterring theft.
- Deterring vandalism.
- Providing camera footage for evidence.
- Monitoring staff performance.
- Monitoring staff safety.
- Giving you visibility of the entire business premises.
- Helping you claim on insurance.
- Reducing insurance premiums.

Mainstreet has identified and reported to police and council increased, vandalism, theft, and antisocial behaviour in the CBD this year.

Appendix

A) Funding Impact statement Whanganui District Council – Long Term Plan 2021-2031 Page 79 Volume 1.

Reference 1: The Central Business District (CBD) services – amount to be collected $518,979. The differential targeted rate to meet the costs of CBD cleaning, maintenance and the Mainstreet Whanganui promotional levy, set under section 16 of the Local Government (Rating) Act 2002 Local Government (Rating) Act 2002 No 6 (as at 28 October 2021), Public Act – New Zealand Legislation, on all commercial rating units in CBD A and CBD B.

B) Revenue and financing policy Page 103 Whanganui District Council – Long Term Plan 2021-2031 Page 79 Volume 1.

Reference 2: CBD maintenance " Majority funded by the general rate. Targeted rates levied to properties in the CBD. Minor rental income. Note that using the WDC guidelines that majority is >67%, this is correctly described as partial general rate & partial (38%) targeted rate.

Reference 3: Central Business District maintenance Capital expenditure Oriental Toilets and landscaping Page 172 2021/22.

Reference 4: Central Business District maintenance Service levels, performance measures and targets Page 173:

- Community/Economy/Environment -The CBD is safe, vibrant and contributes to the positive image of Whanganui.
- Community/Environment – The CBD is clean and attractive. Public toilets in the CBD are clean, hygienic, and available.

C) Corporate management Page 270 Whanganui District Council – Long Term Plan 2021-2031 Volume 2.

Risks to our Police CCTV could include: • Environmental disasters that damage the city wide network • Ageing gear and fibre/infrastructure not being replaced in a timely manner Potential consequences are that: • The CCTV network would no longer work because of loss of connectivity of cameras to our server room – if the cameras lose connection they will not be able to record or display the video to be viewed • The CCTV network would become less and less reliable and, eventually be completely unusable.

END

Long Term Plan Amendment 2022/23

This submission is presented on behalf of Mainstreet Whanganui and its members. The submission is authorized by the elected Mainstreet Whanganui Board. The Board has delegated the Mainstreet Whanganui Board Chairperson Christina Emery to speak in support of the submission at the hearing.

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

Question 2: Food Waste Collection

No food waste collection - status quo.

Further comments

I have a lot of feedback with regard to ferry service between Wanganui & Nelson many Marori people are for it I know that Moteka Nelson are a little bit worried because of breeding of sea birds
I have been a member of forest and Bird & also Dept Conservation, they could set aside a area near Kaikoura end and just run Fuller Ferries that travel to Waiheke Island every day. Would love feedback and maybe a petition up for it.

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

Targeted stakeholder analysis provided 346 votes in favour of kerbside recycling vs 169 for status quo. 68.4% in favour with 214 comments.

- There were concerns around the cost and variable user needs. There was talks regarding rates being too expensive already and how once a week is too much.
- Gratitude that this is not for rural areas
- A general understanding that this benefits those that can not go to the free recycling centre
- Concerns that cost is more than a private company could produce (same as rubbish collection quotes)

Although option one is a preference, a general consensus for user pays is more preferred. This is due to the differences in need between single people and large families. Has calculations been complete on user pays and the ability to choose less often?
-

Question 2: Food Waste Collection

No food waste collection - status quo.

Targeted stakeholder analysis provided 68 votes in favour of kerbside recycling vs 161 for status quo. 29.7% in favour with 214 comments.

- Large concerns regarding a service that is perceived as not required.
- A minority found that there was a benefit but due to the product it creates , they do not wish to pay

Further comments

In both scenarios, there was limited demand to pay more for rates in an environment where everyone is struggling financially. The economic value is not calculated in the proposal and would need more data shared for those that need more logical answers.

It is most imperative to have transparency of economic value as well as social good. This proposal is promising for social good but lacks the data required to make a critical decision. User pays would be in more favour.

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

Question 2: Food Waste Collection

Council provides kerbside food waste collection from 1 July 2024 through a targeted rate at an estimated cost of $61 per year(or $1.17 per week), per household

No extra trucks please!

Further comments

Annoying 3+ rubbish trucks every week. Not efficient, just competition.

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

I think its really imperative to do waste recycling

Question 2: Food Waste Collection

Council provides kerbside food waste collection from 1 July 2024 through a targeted rate at an estimated cost of $61 per year(or $1.17 per week), per household

As above, I think its imperative to do waste recycling.
I ask that consideration is given to green waste in the food waste for composting.

Further comments

I want people to do things themselves and have the following ideas for consideration:
- A professional 'gleaner' at the recycling centre is needed - they are successfully used overseas.
- I suggest that locals get given wool bags (or similar) to collect the oak leaves that block up drains rather than these being put in rubbish bins. Those leaves could be used as mulch at a site/s designated for planting native trees . Also open for grass clippings to be used - perhaps with selected lawn contractors who could deliver the lawn clippings straight to the native tree planting site instead of being dumped at the recycling centre - they could be given a free pass to do it. They would have to be monitored to ensure that branches/prunings were not also used however.
- Old recycling bins could be offered free for composters - 1 per household.
- Education for locals and schools on green waste, mulching and composting for use around their property.
- Planting areas with selected plants that can be used e.g. for maori medicine. would need to ensure consultation is undertaken with tangata whenua.

SUBMISSION

TELEPHONE 0800 327 646 I WEBSITE WWW.FEDFARM.ORG.NZ

To:	**WHANGANUI DISTRICT COUNCIL** 101 Guyton Street, WHANGANUI
Submission on:	Whanganui District Council Annual Plan 2022/23, Long-Term Plan amendment, and the Revenue and Financing Policy
Date:	2 May 2022
Contact:	**MIKE CRANSTONE** **PROVINCIAL PRESIDENT WHANGANUI** Federated Farmers of New Zealand **ADRIENNE COOK** **POLICY ADVISOR (REGIONAL)** (primary contact) Federated Farmers of New Zealand **m**: 027 425 3303 **|** **e**: acook@fedfarm.org.nz

1. The Whanganui Province of Federated Farmers (Federated Farmers) welcomes the chance to submit on the Whanganui District Councils (the Council) Annual Plan 2022/23, Long-Term Plan amendment, and the Revenue and Financing Policy. We acknowledge any submissions made by individual members of Federated Farmers.

2. We would like to be heard in support of our submission.

SUBMISSION

3. We understand that during the long-term plan and this year's annual plan there has been considerable level of pressure due to external factors such as COVID, inflation, and central government implications on three waters and other reforms.

4. Rates are among the top ten operational expenses of a farming business. They are a source of considerable financial pressure for all farmers. Federated Farmers makes submissions on APs and LTPs to ensure Councils exercise fiscal prudence, and consider affordability, fairness, and

equity issues when recovering rates (to the extent this is possible in land and capital value rating systems).

5. Our submission covers the following points:

    - Kerbside Collection (recycling and food waste)
    - Fees and Charges
    - Revenue and Financing Policy

Key Issues

Kerbside Collection (recycling and food waste)

6. We **oppose** the start-up costs of the kerbside collection (for recycling and food waste) to be funded from the general rate. We are pleased to see that partial funding will come from waste levies and a loan; however, a portion of the set-up costs will be funded from the general rate. We suggest that the proposed loan includes the start-up costs, with a portion of targeted rates paying back the loan over the lifespan of the loan. This would ensure that the proposed introduction of kerbside recycling and food waste was funded through user pays, and through the waste levy.

7. We wish to outline the importance of targeting the right ratepayers which utilise the service. Funding of the start-up of the kerbside collection should be a targeted rate on those property owners who will benefit from the new kerbside recycling collection services. There are no kerbside recycling collection services in rural areas, and farmers must therefore dispose of their own domestic and farm recycling at their own expense. It is highly unfair to expect farmers to pay an increase on their general rate for the start-up of a service that they do not get, while also having to pay for their own recycling disposal.

8. We **highlight** that further funding is coming towards the council's waste minimisation funds, with half of the proposed $60 /ton landfill levy being returned to councils. We think that it is appropriate to further utilise the current funds for setup costs.

9. Federated Farmers **supports** the Councils targeted rate (from 2023/24 onwards) for the kerbside recycling. This is important to farmers, who do not benefit from the Council's service.

10. There is no commentary from the Council to indicate if rural communities, such as Fordell, have been surveyed to see if they wish to be included in the kerbside recycling scheme? We request the results of the surveys if completed be publicised, and their inclusion in the scheme is supported by a majority of the communities' ratepayers. If rural communities were included as part of the scheme, we would expect that those communities would also have a targeted rate applied.

11. Federated Farmers **recommends** that the food waste collection be delayed until accurate science and climate change mitigation is accurately costed. 91% of methane emitted from the

Bonny Glen landfill is captured and used to generate electricity. We suggest that the estimated removal of greenhouse gases (GHG) is overstated, and that the monetary and carbon emissions from collection and processing must be accounted for. The council has employed a Climate Mitigation Officer, and an education role of this officer could promote more composting of food waste by ratepayers, this being the most efficient and effective climate mitigation action for food waste.

12. We note within the consultation document that the proposed "targeted rate per household" is an estimate, and that further reading indicates that the Council has not yet confirmed a rate with the contractor. Therefore, the proposed rate within the consultation document would be liable to change and have the potential for exceeding budgets.

13. We question where additional funds would be coming from, if the proposed targeted rate increases, once the Council has clarified the exact amount of the target rate per household? We must presume that in the absence of clear information in the Council's Annual Plan consultation document on how the new kerbside collection overspend will be funded if it exceeds the current estimated costs, and that the Council intends for such exceeded estimates to be absorbed by the general rate. We reiterate that overspend should not be absorbed into the general rate.

14. Federated Farmers **recommends** that the kerbside recycling (and food waste) collection service be structured so that cost risks is factored into the charges to be recovered from a targeted rate.

15. We **support** the stance that the Council has taken, which applies the target rate for all residential households, thus making the newly introduced service financially viable using exact numbers of households contributing towards the targeted rate.

16. We seek **clarification** on the impact of businesses being able to opt into the service, and how this would work in practice (the viability of extending the collection route/capacity within the contract versus the target rate for opting-in for businesses)? Would the Council keep the same targeted rate for businesses, or would this be reflected in a higher rate, due to the level of uncertainty as to how many businesses will choose to opt-in and if they choose to remain opted-in or leave the scheme (over time)?

17. We **support** the continuation of waste facility sites. This enables those residents not captured in the targeted rate recycling and food waste collection service, to continue to use (and pay for) refuse disposal, green waste, and recycling at the designated waste facility sites.

- **Federated Farmers opposes the start-up revenue for the kerbside recycling and food waste collection in the 2022/23 year coming from the general rate.**
- **Federated Farmers supports the targeted rate for kerbside recycling collection in the 2023/24 year onwards.**
- **Federated Farmers recommends that the food collection service is delayed, with further research into GHG and environmental effects.**

- **Federated Farmers recommends that cost risk is factored into charges recoverable from the targeted rate.**
- **Federated Farmers supports the targeted rate to apply to all residential households.**
- **Federated Farmers supports the continuation of the waste facilities, which enables those not captured in targeted rate to continue to access (and pay for) refuse disposal and recycling.**

Fees and Charges

18. Federated Farmers **supports** the increase of the Splash Centre fees, and we agree that users of the facility should directly fund a portion of the increased operational costs.

Revenue and Financing Policy

19. Federated Farmers **supports** the use of targeted rates to allow for a fairer user pays approach to services which are not utilised by all rate payers.

20. We propose an **amendment** to the Revenue and Financing Policy on page 3 of the document. Under the section "Targeted rates" we recommend the following amendment, which will provide transparency and consistency within the policy by listing kerbside recycling as a targeted rate now and into the future (note we have not included food waste in this list – see paragraph 11 above):
    "*Targeted rates apply to the following activities:*

    - *Roading*
    - *Footpaths and berms*
    - *Wastewater*
    - *Water supply*
    - *Stormwater*
    - *Kerbside recycling*
    - *CBD maintenance*
    - *Earthquake strengthening*"

- **Federated Farmers supports the use of targeted rates which allows for a fairer user pays approach.**
- **Federated Farmers recommends that the Revenue and Financing Policy is amended to include kerbside recycling as one of the activities listed under "targeted rates".**

UAGC

21. Federated Farmers supports Councils use of the UAGC to enable for further equal funding of key activities within the district. As a way to fairly distribute costs throughout the ratepayers, we believe it is sensible for Councils to utilise as much of the 30% available under the Local Government Act as possible. We thank the Council for the use of the UAGC. We **note** that the UAGC has not changed and remains at $700 per separately used or inhabited part of a rating unit.

Rates increase

22. Federated Farmers **supports** the Council's approach of dropping the debt reduction plan, which has resulted in the Council stabilising the rate increase. However, we would like to see this publicised, so that we can ascertain how much this was.

About

Federated Farmers is a not-for-profit primary sector advocacy organisation that represents farmers, and other rural businesses. Federated Farmers has a long and proud history of representing the needs and interests of New Zealand's farmers.

The Federation aims to add value to its members' businesses. Our key strategic outcomes include the need for New Zealand to provide an economic and social environment within which:

- Our members may operate their businesses in a fair and flexible commercial environment;
- Our members' families and their staff have access to services essential to the needs of the rural community; and
- Our members adopt responsible management and environmental practices.

This submission is representative of member views and reflect the fact that local government rating and spending policies impact on our member's daily lives as farmers and members of local communities.

Federated Farmers thanks the Whanganui District Council for considering our submission on the Annual Plan 22/23, Long-Term Plan amendment, and the Revenue and Financing Policy.

Living Wage Whanganui

Submission on Whanganui District Council Annual Plan 2022-23

Congratulations, again, to Whanganui District Council (WDC) for continuing to be an employer paying its employees at or above the Living Wage (LW), currently $22.75 per hour.

With the 5.9% increase in the CPI for the year to 31 December 2021, workers receiving low wages will continue to find it difficult to afford the basics, live with dignity and participate in society. We urge WDC to recognise that wages at the low end of the scale need to increase, and ask that WDC move all workers up to rates at or above the new Living Wage rate of $23.65 on or before 1 September 2022.

In our submission last year we pointed out that the Living Wage is affordable for WDC. We encouraged WDC to become an accredited Living Wage employer. We continue to submit that this is the step WDC needs to take to benefit the employees of its contractors.

The internal paper "Consideration of a Living Wage Policy" provided to the Council for its meeting on 7 December last year looked at the case for and against WDC becoming an accredited LW. Under the Summary of Considerations, the paper noted that maintaining pay parity will be an additional, not always quantifiable cost, to WDC.

To address this, we suggest WDC develop a policy setting out the rationale for maintaining the LW rate i.e. to benefit workers at the lowest rates, and setting parameters for parity on this issue. We understand that such an approach enabled Dunedin City Council to manage this issue in wage negotiations as it worked towards LW accreditation.

WDC could also look to assist the workers employed by its contractors. It is likely that the LW rate would make a positive difference for these workers.

In summary, our Submission is that WDC adopt a Living Wage Policy addressing the following points:

- WDC will continue to pay all its direct employees the current LW, implemented as new LW rates come into effect,
- Setting parameters on pay parity claims where wage increases are paid for the purpose of implementing LW increases,
- Expressing a preference for tenders which provide LW rates for employees.

We would like to appear in support of our submission.

Marion Sanson (for Living Wage Whanganui)

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

I am against this, but mostly for reasons that it doesn't go far enough, which is the opposite of what most people marking Option 2 are trying to say. As I just had my comment deleted by my computer, I'll take it as a sign just to show up and say my piece in public.

Long story short, recycling is an ambulance at the bottom of the cliff. Prevention, reduction, reuse, rotting are priority. I'd like to see more of these first, but I'm new to the area, so have a lot to learn.

Question 2: Food Waste Collection

No food waste collection - status quo.

I am against this, but mostly for reasons that it doesn't go far enough, which is the opposite of what most people marking Option 2 are trying to say. As I just had my comment deleted by my computer, I'll take it as a sign just to show up and say my piece in public.

Long story short, this method of carbon reduction is an ambulance at the bottom of the cliff. Prevention, reduction, reuse, rotting are priority. I'd like to see more of these first, but I'm new to the area, so have a lot to learn.

For instance, the average cow emits methane that is the equivalent of about 1 metric ton a year. So, why not just eliminate the equivalent in more efficient ways? E.g. reduce cattle by 308 cows? Take 100 cars off the road by creating car co-ops and making bus systems actually useful (every 2 hours won't cut it, so lobby the regional council or step up here).

See cow figure here "There is over a billion head of cattle throughout the world, with each cow emitting methane equivalent to around 1 tonne of carbon dioxide per year" -- https://www.rgs.org/RGS/media/RGS-Media-Library/Schools/Teaching%20resources/10-Cow-burps-Updated.pdf

Also, the contaminants due to lack of education on composting are going to be tremendous. At least 20% of your budget should be spent doing door to door education.

More on this May 12

Further comments

Please do the maths. Remember that feel-good measures always make things worse -- they make us feel like we're addressing the issue, and thus we let our guard down, and start to see necessary change as too difficult. Dump something by the road is not much better of a plan than shrugging and burning. We need a much bigger solution.

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

The Youth Council is in 100% agreement that this should be implemented in Whanganui as a help to fight against climate change. Youth Council members have noted that seeing these practices in the home is great for children (and youth) to learn with the hope that they continue with the habit in future years.
No issues with cost.
Convenient for recycling.

Question 2: Food Waste Collection

Council provides kerbside food waste collection from 1 July 2024 through a targeted rate at an estimated cost of $61 per year(or $1.17 per week), per household

Youth Council members discussed that there is a possibility that some District residents may already have ways that they are 'getting rid' of food waste (such as home or community compost bins, and / or animals such as chickens or pigs). This means that some people may not (need to / want to) use the bins. The Youth Council discussed what a possible solution for this would be and they didn't come to a clear conclusion. Noting that if residents are given an option to opt-out then it defeats the purpose of trying to get as many people as possible to help with a collective sustainable / climate action in this way (and may also raise the cost for others).
No issue with cost (with above noted considerations)
Convenient way to dispose of food waste.

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

Wanganui has a recycling center that everyone is able to use free of charge . Essential living costs are rising hugely and putting pressure on my family as it is. I do not wish to pay any additional costs for this service.

Question 2: Food Waste Collection

No food waste collection - status quo.

We compost our own food waste and as above I do not wish to add additional costs to our weekly expenses , things are already stretched enough!

Further comments

Both of these should be optional for those households that wish to partake. I feel it is a big ask for people already struggling to make ends meet to be charging for things that we can currently do for free.

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

Great to have the option of kerbside collections for those who can't easily access the recycling facility. I would be interested to know what sort of bins would be used as a lidded/small wheelie bin would be better for stopping recyclables from blowing away when put out for collection rather than an open bin.

Question 2: Food Waste Collection

Council provides kerbside food waste collection from 1 July 2024 through a targeted rate at an estimated cost of $61 per year(or $1.17 per week), per household

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

I will find it more convenient and much easier to recycle with this option. There will be less items stored at home for a long period, waiting until I can get into town to recycle.

Question 2: Food Waste Collection

Council provides kerbside food waste collection from 1 July 2024 through a targeted rate at an estimated cost of $61 per year(or $1.17 per week), per household

I have a worm farms, but can't add much of my food waste. This option would reduce the amount going to landfill.

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

Our family already do our own recycling and use our local recycling center as the kids enjoy this. We will still continue to do this if kerbside recycling comes in but we do support it as an option.

Question 2: Food Waste Collection

No food waste collection - status quo.

I don't support this. We as a family hardly ever have food scraps or leftovers and the small amount we would have gets fed to our chickens. Alot of families I have spoken too about this food recycling option also don't support this and are in the same situation as us not having food sca
Raps or leftovers. I think this is a waste of tax payer money especially when it could be used on other far more important things needed.

Further comments

There should be an opt out option for all rate payers as a small minority don't speak for all. I am sick and tired as a rate payer having to pay for things that very little of the actual wanganui rate payers want or agree to. It feels like as a rate payer we are never listened too.

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

Our rates are already sky high.
Lots of other towns pay less for their rates, and still get recycling.
I do not under any circumstance want to pay for kerbside recycling, without having an opt out clause.
This is appalling.

Question 2: Food Waste Collection

No food waste collection - status quo.

Our rates are already sky high, I do not want anything that is going to increase this even more.

Further comments

Rates are already sky high, and we get way less that lower rate towns do.
You must be crazy if you think raising our rates is a good thing.
The only way I would ever approve of kerbside recycling, is with no increase in our rates.
Open your eyes and look at what other lower rates town have as facilities, we have bugger all for people to do, and instead of focusing on stuff like that, you want to focus on raising out rates for kerbside recycling.
IF you go ahead with this ludacris idea, at least have an opt out option.

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

Currently we are taking ours to the recycling center on our way to shopping. We pay $0 for it. Throughout this experience we consider about recycling materials and rubbish with our children. It's a true life education for them too. So I love this city.

Question 2: Food Waste Collection

No food waste collection - status quo.

We compost all our food waste. So we don't have anything to give away. Everything turning into the soil expect commercially recyclable papers. We use Bokashi bin for the kitchen wastes and cooked left over foods too. Rest of the wet foods such as some fat and soup are going to Japanese decomposer box Kiero. Which is promoting by some of Japanese city to improve their foods wastage. It's useful especially people who don't have a garden because it's not making more the soil.
Like a compost bin. It's easy to use even for the elderly people, once it's set up.

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

Too expensive and the cost will climb every year. A wheelie bin cheaper. Happy to do my own recycling at centre rates dear enough already struggling as it is.

Question 2: Food Waste Collection

No food waste collection - status quo.

Ate you kidding i pay for people to put their food scraps on the roadside in my rates and animals knocking bins over and spilling the contents all over the steets. Disgusting in summer, health hazard, rotting food on the streets.
People need to get a life and not be lazy and expect the whole community to pay to hv their scraps picked up. Immagine bins wth rotting fish and maggot meat after a week in summer in a plastic bin

Further comments

No way i can afford extra rates. Other towns get a wheelie bin in their rates which are way lower than wanganui. Wanganuis are already one of the highest in the country.
People are already struggling council want to push people on tight budgets to mortagee sales with additional costs they cant pay

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

I live alone, and generate a minuscule amount of waste, visiting the recycling centre once every 6-8 weeks. I find this policy inequitable in that I am to be rated the same as a large family generating a much larger quantity. I would prefer a user pays option, or the ability to opt out.

Question 2: Food Waste Collection

No food waste collection - status quo.

Absolutely I find this suggestion very unjust. I purchase pre-made meals where any waste component is built into my payment structure already. I use a compost system which accounts for any tiny amount of food waste I generate. I definitely would NOT require Food Waste Collection, and would consider it unfair to be rated accordingly.

Further comments

An across the board rate charge for all residential home owners, via rates charges, is unjust and inequitable. Any fee needs to be considered on a user pays model, with variations to accomodate different household sizes and personal lifestyle choices already adopted to improve personal waste minimisation.

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

We take our recycling to the recycling transfer station every week. It is a free service and I do not want to have to start paying. If people don't want to take their recycling there or are unable to, then kerbside collection could be an option for households but not compulsory. Educate people what can be recycled and get them to take their recycling to the centre. Even if there is kerbside recycling, a lot of people might not recycle everything they could as they can't be bothered to wash the containers or they don't know what can be recycled - you will also probably receive a lot of stuff that is unable to be recycled.

Question 2: Food Waste Collection

No food waste collection - status quo.

Again it is an extra cost I do not want. I also don't fancy food sitting in a bin getting smelly for a week. They have this collection in the UK and I hate the smell of the food sitting in the bin. It means everyone will collect their food waste into a container inside the home -first people aren't going to walk outside every time they have a food scrap to put it in the proper bin & this will become a health hazard in some homes. Why not encourage/educate people to compost their food waste. Could be an optional collection.

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

We are so far behind the times with this kind of initiative. Look at most other councils, have already implemented this year's ago. We truly are asleep with this. Ratepayers have been pushing for it for years and the mickey mouse way council go about doing things is embarrassing.

Question 2: Food Waste Collection

No food waste collection - status quo.

My personal opinion is we wouldn't use it as a family as we compost. As a general rule I feel it would be more Hassel than it's worth.

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

I think it should be free and the only requirement is to make sure that waste and plastic recycling are put out on the specified day per suburb. We need to take into consideration the less fortunate ones who don't have a vehicle that are unable to do their weekly recycling at the center. Seen as we already pay for rubbish collection via wheelie bin or rubbish stickers we also have to fork out a hefty price at the local dumpster which unfortunately has only increased in the last year. So giving each household a recycling bin and a waste recycling bin free of charge would make our world greener with cleaner air! I can guarantee most of Whanganui would gladly participate in keeping it green! And besides the Council would already make quite alot of money with the parking meters that are situated throughout most of Whanganui's City Centre, there is now close to no unmetered parking. Unfortunately there isn't a third option to choose stating that the council will give each household waste & recycling bin for me to choose that as an option, therefore I have to choose option 1 in order for my statement to be heard/read.

Question 2: Food Waste Collection

Council provides kerbside food waste collection from 1 July 2024 through a targeted rate at an estimated cost of $61 per year(or $1.17 per week), per household

Comment previously stated is in relation to Question 2 as well.

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

Our neighborhood has mostly one or two people per household and it's a big burden financially for single people to have a bin each.

Question 2: Food Waste Collection

No food waste collection - status quo.

This should not be costed per household. Our neighborhood has mostly one or two people per household and it's a big burden financially for single people to have a bin each.

Further comments

The Council has problems with providing rubbish collection that much is obvious. One size does not fit all. In rural areas the amount of rubbish left at collection points should be collected more than once a week.
Areas with a mostly retired population should not have to pay for a bin each household.
Council needs to have a tailored approach and not just outsource this to a private company that doesn't have a local "focus" or is invested in the Whanganui community.

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

The current model favours those with the knowledge and means to recycle i.e. by having transport options, mobility and awareness to be able to recycle. It makes sense to offer a recycling service however there needs to be money allocated and spent on education on how to reduce and reuse as well as understand what even is recyclable in NZ. Otherwise people will just see this as a way to put it at the kerb and forget about it, including contaminating recycling with other waste.

Question 2: Food Waste Collection

This money would be better spent on reducing food waste before it becomes waste, rather than giving people the ability to put it out and forget about it. If they even do that, for many people using a food waste bin may be difficult for them. It would be better to focus on education efforts and building community around what can be done to either reduce food waste or in that community to benefit that community i.e. community garden, providing to other people who need it. We need people to have more attachment to what happens to waste, and food is the perfect opportunity to think about this in a different way because people can see the benefit of changing approaches to food waste in their everyday life. Food provides the perfect example of growth, death and regeneration that everyone has some skin in the game to care about. People need to connect with food to help them make better decisions, rather than just making it easier to throw away and not think about it.

Further comments

Council needs to rethink the approach to general waste. It is insane that there are 3 providers with the potential for others to enter the market at any time and that no consideration is given to the emissions that come from all the rubbish trucks. Why not make it requirement for these providers to commit to changing to electric vehicles to service this market? Or go through an appropriate tender process for only one dedicated provider that has a commitment to hybrid or electric vehicles. If both of these new waste services go ahead, it is just going to keep adding vehicles and providers to the road creating other emissions that further climate change.

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

I moved to Whanganui from South Canterbury in February. I felt as if I had gone back 10 or more years with the lack of kerbside recycling. We used to have a small red household waste bin , a large yellow recycling bin, a small glass only bin, all of which were emptied alternately every second week. The large green garden waste bin was emptied every week. Now we drive our vehicle to the recycling centre every week, along with every other household in Whanganui. Very bad for the environment. Two or three different company trucks follow each other around the city collecting the red bins , instead of one council truck. Very inefficient use of vehicles & time. Kerbside collection is the only way to go!

Question 2: Food Waste Collection

Council provides kerbside food waste collection from 1 July 2024 through a targeted rate at an estimated cost of $61 per year(or $1.17 per week), per household

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

I strongly support implementing a kerbside recycling collection. I was very surprised when I moved here from Wellington three years ago that Whanganui did not have a kerbside recycling collection. I am tired of visiting the recycling centre (especially when covid is prevalent in our community).

Question 2: Food Waste Collection

No food waste collection - status quo.

I am against the funding of a kerbside food waste collection through rates. I would rather do household composting or for a community composting scheme to be implemented.

KEY ISSUES

Question 1: Kerbside recycling

Question 2: Food Waste Collection

Further comments

We have the following comments for Council's consideration regarding the implementation of the new kerbside and food waste services.

1) While we agree with the implementation of the paper/plastic/glass kerbside service we think that the Council should be reconsidering the "full" waste collection in the city. The collection by several different collectors is not efficient and we already pay separately for this service which includes for paper, plastic, glass, garden rubbish etc. The Council should be factoring in a full rubbish collection like some other Councils already do.

2) I do not agree with the implementation of food waste collection for several reasons –

a) The food is compostable and we already compost our food scraps.

b) It is an "all inclusive scheme" and we will be forced to pay for something that we will not use.

c) The food sitting in a container for a week is not very hygenic and would be rather smelly.

3) Both the above proposals are "add ons" to our already high rates. We believe the Council should be more vigilant in trying to keep our rates down. Certainly per capita they are higher than a lot of other councils rates.

4) We do not agree with Three waters and feel that our Council should fight to keep the water under the region's control .

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

That would be easier but depending on what recycling is collected because if it's a bin for carbord plastic and whatever else then cool and then what about cans and glass and tins will that come free if we all order a recycling bin???? That's my question but then again recycling done by taking to the waste centres are free so why is there a cost at all for pickup should all be encouraged to be free.

Question 2: Food Waste Collection

No food waste collection - status quo.

Not interested everyone should just start a home made compost for the worms to be feed or sort out a farm that maybe willing to pickup scraps for pigs etc.

Further comments

Free recycling service is my vote we pay heaps already for rubbish bins a month.

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

I support and undertake recycling. I enjoy going to the recycling center as already exists. My issue with the proposed scheme is the bins are not weather or wind tight and the potential for our streets to be covered in recyclable litter is high. I witnessed this occur when I lived in the Hawkes Bay as the same system was introduced. Also the recycling was largely contaminated by the many who abuse the system ie using it to dispose of their rubbish. The awesome staff at the recycling center do a wonderful job at trying to educate people and prevent this occurrence by stopping it at the point of entering the recycling system.
I do not believe this system being proposed is a good fit for Whanganui and do not support it.

Question 2: Food Waste Collection

No food waste collection - status quo.

This absolutely disusts me to have our streets with food scraps. The bins you propose at least have lids which is good. Are they strong enough to prevent dog's, cat's and vermon from getting to the scraps and scattering it around our streets?
I compost and literally have no scraps to put in the bucket - vegan diet here.
I would support a depot where users could take there food scraps and pay a charge to deposit them. I am not in favor of this proposal at all

Lived in Palmerston North 10 years ago and their glass and recycling pickup was fantastic. I really hope Wanganui can follow suit. Better late than never.

Question 2: Food Waste Collection

No food waste collection - status quo.

Food waste is readily biodegradable, so the benefit is not so clear, except perhaps convenience. My workplace and other small businesses already have systems in place where food waste is donated to feed pigs- while I don't see a benefit for residential and small businesses, perhaps a collection would have some value for places that do stock large amounts of food. Although NZ does waste a lot of food, I query whether food waste collection would even encourage further wastage if provided to residential homes.

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

I think this a great option especially for people who can't to the recycling centre

Question 2: Food Waste Collection

No food waste collection - status quo.

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

Question 2: Food Waste Collection

No food waste collection - status quo.

I already compost my food waste as so many wither people do. I would be really pissed of if I got charged for something I won't use.

Further comments

The council for example could come and clean cutters in our all of our streets. Fix foot paths and entrances. I am over paying rates for things that I don't need or want.
The council needs to listen to us rate payers.

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

Not everyone wants this, or can do it themselves for free. I do my own recycling, & have compost system where my food scraps benefit my garden.
If someone wants roadside recycling/food waste, wouldn't it be fairer that they pay for the service and not everyone charged. It could be like one of low-cost red wheelie bins plans, where only get charged when I put bin out to get emptied. This is via "chip" in bin, which is read by a "chip reader"

Question 2: Food Waste Collection

No food waste collection - status quo.

As above

KEY ISSUES

Question 1: Kerbside recycling

I support the extension of recycling services. The universal rates increase to provide the service penalises those ,such as myself, who practice waste minimisation. An "opt out " option would be best.

Question 2: Food Waste Collection

Penalises those who compost food waste. An "opt out " option is needed.

Further comments

Nothing in council strategies targets waste minimisation. Recent information released by climate scientists clearly states that radical change to individual and collective lifestyles has to happen. Local and central government can and must take the lead in this matter.

Further comments

I wish to motivate for the gravel section of Kaikokopu Road to be sealed but to have a vehicle weight limit to exclude heavy vehicles (other than local deliveries).

- The rural residential area at the top of Kaikokopu Road has grown significantly in the past decade and there are now sufficient houses in that region to justify sealing the road.
- Most of the residents at the Blueskin Road end of Kaikokopu Road usually travel to the CBD along Blueskin Road and Great North Road but this is 1-4 km further than going along Kaikokopu Road via Aramoho. If the road were sealed, many of these residents would be able to reduce their daily travel distances.
- Kaikokopu Road provides a very attractive cycle route. I like to cycle to the CBD or to the river, but I find that corrugated section of gravel road is too bumpy and not suitable for a bicycle. Recreational cycling around Whanganui with this link to the cycleway at the river could be enhanced by sealing Kaikokopu Road. We should encourage a move away from cars towards environmentally friendly means of transport such as bicycles. Providing suitable bicycle routes is part of this process.
- Other similar rural roads in the region have already been sealed many years ago, so Kaikokopu Road is the outlier in this regard. Consider roads such as Brunswick Road, Western Line, Watt Livingstone Road, Kai Iwi Valley Road.

The hairpin bend on the hill makes this road unsuitable for heavy articulated vehicles. I therefore suggest sealing the road but imposing a maximum vehicle mass up the hill (perhaps 10 tons) except for local deliveries.

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

We only have about 4 items a week so we go to the recycling center about once every couple months.

Question 2: Food Waste Collection

No food waste collection - status quo.

We have a tiny bit of food scraps that goes in the waste disposal. And for the likes of people living alone it would take months to fill a bin.

Further comments

People shouldn't have to pay for services that wouldn't be used weekly. If we are going to be forced to have the bins they should only be charged for when they are full and put out.

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

I take my recycling to the recycling center.

Question 2: Food Waste Collection

No food waste collection - status quo.

I compost all my food waste and have done for many years. I do not want to pay for the council to pick up my food waste.

Further comments

I think it is unfair to pay for kerbside recycling and food waste when I have been doing so for many years. I do not want a rate increase for these services. Whanganui rates are very high and soon home owners will not be able to afford to live in their own homes.

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

We are elderly and live near Mowhanau. It is a big inconvenience to drive to the recycling centre. So much so that we avoid it which leads to a pile up of recyclables making the aforementioned situation even worse

Question 2: Food Waste Collection

No food waste collection - status quo.

Unnecessary. We compost our food waste

Further comments

A large wheelie bin with fortnightly recycling would be excellent. Another option to be considered could be to alternate rubbish pick up and recycling. For example Southland district offers red lidded and yellow lidded bins for recycling and general waste. One week general waste collection, next week recycling.

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

If we opt in to your recycling, we still have to pay for a bin for our green waste etc. I have been doing this for a number of years now and it is a fee on top of our rates (which are extremely expensive). Council needs to remember that as a pensioner, I am on a limited income, and you just keep raising the rates thinking we have an endless bucket of money. You are proposing that each household has 3 bins- ridiculous.

Question 2: Food Waste Collection

No food waste collection - status quo.

I have a worm farm in which I put my food waste so why should I pay for another bin. You are not even giving us an option to not have this so this becomes a further increase to our rates.

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

This will help make recycling more accessible to people who can't be bothered, or don't have the time and/or resources to be able to go to the recycling themselves.
It also saves people the trouble of manual sorting the recycling themselves which will make it more likely that more people will recycle.

Question 2: Food Waste Collection

Council provides kerbside food waste collection from 1 July 2024 through a targeted rate at an estimated cost of $61 per year(or $1.17 per week), per household

We compost so it doesn't make a difference to us, but I think this is a great way for you guys to potentially get more compost going for council use in gardens etc

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

I believe we are being forced into an extra cost which we cannot afford to indulge people who want this to happen but have expectations their wants should be paid for by everyone. There is no reason that a business cannot provide this service and charge those who wish to make it happen but it would appear these people feel that everyone should be forced to pay for their wants which is totally unfair.

Question 2: Food Waste Collection

No food waste collection - status quo.

I believe we are being forced into an extra cost which we cannot afford to indulge people who want this to happen but have expectations their wants should be paid for by everyone. There is no reason that a business cannot provide this service and charge those who wish to make it happen but it would appear these people feel that everyone should be forced to pay for their wants which is totally unfair.

Further comments

How long will the council continue to force the rate payer to keep on paying for more and more unnecessary ideas. We have a great recycling centre, the staff are helpful and pleasant and it earns a tick from most people that I know . It would appear that Council are very well paid and increasing the rates means nothing to them but consider being a pensioner and trying to find the money to cover the constant rises in rates we are being inflicted with.

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

It sounds reasonable to have recycling. It should be optional service not imposed. Also with the high rates we are already paying hopefully it is taken out of what we are already paying . Not an added on cost.

Question 2: Food Waste Collection

No food waste collection - status quo.

I have minimal waste and have an insinkerartor to get rid of food waste. People with small families have minimal food waste to go into collection bin.
Not all food from other families would be ideal to go into food collection bin.
A lot of people use kitchen waste as garden compost . Hence a compulsory food waste collection is going to be waste . All these collections should be optional.

Further comments

I have written detail comment about options I have chosen. Please refer above .

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

No one can afford more money right now leave the rates as they are

Question 2: Food Waste Collection

No food waste collection - status quo.

You can compost these at home!

Further comments

It’s just an excuse to suck more money out of us

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

If the collectors do the job with a bit of extra work at times it might become a tidy place all over Whanganui

Question 2: Food Waste Collection

Council provides kerbside food waste collection from 1 July 2024 through a targeted rate at an estimated cost of $61 per year(or $1.17 per week), per household

What about rats and mice attacking the bin of food. Hopefully the bin is protected from all that

Further comments

I hope it just make a mess of Whanganui

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

1. Most people that put their recycling in the bin will continue to do so.
2. Most people that want to recycle, do now. Drive to the recycling centre.
3. Most importantly, It does not encourage people to do away with waste. We should be moving to having less plastic… not making it easier to get rid of.

Question 2: Food Waste Collection

No food waste collection - status quo.

I think this is ridiculous… there are a lot of people that have compost bins or worm systems. They should not be penalised in their rates. But more importantly, I do not believe that the people who don't have a compost bin will take the time to put their food waste in a bin and at the gate to be collected. If you are going to keep your food waste for a week (yuk) , would it not be better just to have a compost bin or one of those bin type systems.

Further comments

Personally I do recycling once a month, put out one rubbish bag a month and have a compost bin.
Education is a better option.
Improving the recycling station would help too. The labelling since the changes in what is taken, needs to be updated better.
Also, many people (including me) are very sceptical about whether the recycling is actually recycled. In fact… there have been many reports that it isn't. That it is being stockpiles somewhere. I do it for 2 reasons… it's free and I live in hope it will be in future.
All reasons why we shouldn't go in this direct… focus on reducing waste not enabling people to buy products with plastic waste!

Question 2: Food Waste Collection

No food waste collection - status quo.

I have very little food waste, if any so I'd rather see a rubbish collection service instead of a food collection service. We should be able to choose our preferred bin size and obviously pay for it accordingly.

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

As I live on my own I do not feel this is viable for me as I do not make enough rubbish to warrant this. I pay for my own bin which is emptied fortnightly and don't feel that adding extra on top would help and making everybody pay. I also do not believe that the cost would stay this low as what happened with the rubbish stickers the price kept going up and up which would then make it a struggle for slot if people

Question 2: Food Waste Collection

No food waste collection - status quo.

As I live on my own I strongly oppose this as I do not make enough food waste to warrant this as you would find withalot of people living on there own or who don't have big families. It's hard enough paying everything as it is without extra on top and again I feel the price would jump after a year like everything else

Further comments

I do not support either. I have to already pay for my rubbish on one income why do I have to pay for more rubbish and knowing this council the price will not stop at this and will keep going up.

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

We have very little waste as we believe in reusable container, bottles, jars etc. what little waste/recycling we have is way more cost efficient for us to take o the recycling center ourselves. If anything this needs to be an optional service.

Question 2: Food Waste Collection

No food waste collection - status quo.

We compost all our food waste so we would never use this. Forcing un-used services onto rate payers would just just outright be unfair. Once again this if anything should be optional.

KEY ISSUES

Question 1: Kerbside recycling

Well I would suggest you stick to status quo, you are raising rates each year at a rate that's way out of control. You are basing thses rates on the values of people's homes they've saved hard to buy. And now basically you are taxi g them on it again, we are taxed by the government in wages, then buying houses and more and you have rates for which you show no difference in what we receive from you and any improvements from the council in the district ..
Once you share exactly what you all spend the rates on you should not be raising them unjustified and just to earn $2.58 per week per house.
That's alot of money each week to recycle which I would guarantee you are paying another company to do for you that's not even New Zealand owned

Question 2: Food Waste Collection

No food waste collection - status quo.

No need , teach the public how to compost at home plus many homes have a insinkerator that'll take care of most food scraps

Further comments

Please don't raise rates further without explaining exactly what each penny is being spent on..
And definitely don't raise them to collect recycling

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

We are one of the households that recycles, composts and reduces waste to landfill. But I still support this move, because it will reduce waste to landfill from other people.
A kerbside recycling option will cut out the necessity to take recyclables to the
resource recovery centre. It will be much more convenient to put them out at the kerb, and they won't pile up so much.

Question 2: Food Waste Collection

Council provides kerbside food waste collection from 1 July 2024 through a targeted rate at an estimated cost of $61 per year(or $1.17 per week), per household

I don't send food waste to landfill, but I know that other people do. This move will make sure less food gets there and I don't mind paying for it.
I'm unlikely to use it myself, for meat scraps and cooked food, because I have other options for those.

Further comments

I support a kerbside green waste collection too.
I would probably only use it for problem weeds that are hard to compost.
But it is crazy to put green waste into landfill.

Question 2: Food Waste Collection	
Please provide any comments in support of your answer to Question 2:	
General comments and feedback. Please use this space to provide any further feedback or comments you wish to make:	This is an extra comment, adding to my earlier submission. I think it is appalling that Whanganui green waste is trucked to Palmerston for disposal or composting. We should have our own composting facility, with the potential to add other material such as sewage sludge once it is free of toxic chromium, and animal paunch contents. I know there have been problems with previous composting attempts. But we have the space and lots of compostable material. The resulting compost would be a resource. Having green waste composting would also hopefully stop people dumping weeds over riverbanks and other such places. Some education alongside this would be good - about which weeds are most damaging when dumped in wild places.

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

I have worked in the recycling and recovery sector for most of my career. In particular, my interest is in ensuring that communities across New Zealand have access to world-class recovery systems. I'm delighted to see my Council taking up the call to arms to ensure our local community can help have a positive impact on waste and carbon emission minimisation.

Question 2: Food Waste Collection

Council provides kerbside food waste collection from 1 July 2024 through a targeted rate at an estimated cost of $61 per year(or $1.17 per week), per household

I'm in support of food waste kerbside collection for the reasons stated above.

CLIMATE ACTION JOINT COMMITTEE SUBMISSION TO THE DRAFT 2022-23 ANNUAL PLAN

Thank you for the opportunity to engage with Whanganui District Council through Annual Plan consultation. The Climate Action Joint Committee was formed to coordinate regional climate response and provide advice to councils. We are writing to all territorial authorities in the region to highlight the urgent need for action on climate change and its integration into in all council activities.

Together, we have made a start on tackling climate change in our region. We thank your Council for supporting Mayor Hamish McDouall's work as a member of the Joint Committee and for providing council staff to assist the work of the committee.

The Joint Committee is currently working on a regional action plan, drawing on the priorities identified by territorial authorities. The Regional Climate Action Plan is envisioned to provide a framework for coordinated action across the region. We aim to submit the regional action plan to you for consideration later this year. To be effective, it will rely on decisions by councils in the new triennium.

In the meantime, we urge you to consider what opportunities for action exist through your Annual Plan. Time is of the essence. We draw your attention to the recently released Intergovernmental Panel on Climate Change Working Group II's Sixth Assessment Report, '*Impacts, adaption and vulnerability*.' Key messages of that report include:

- Evidence that climate change is caused by human activities is unequivocal.
- Government, business and communities in New Zealand have experienced major cost associated with extreme weather, droughts and sea-level rise.
- The amount of greenhouse gas emissions to limit global warning to as close as feasible to 1.5°C, the goal in the 2015 Paris Agreement is less than previously thought. Limiting warning to close to 1.5°C substantially reduces projected losses and damages related to climate change in ecosystems and human systems.
- Projected global warning under current global emissions and policies will likely leave many human and natural systems at very high risk and beyond adaptive limits. The more we emit, the harder it will be to adapt.
- Delay in implementing adaptive measures and emission reductions will result in more costly climate impacts. Long-term the ability to adapt becomes increasingly limited if emissions do not rapidly decline.
- We have made progress but are not adapting fast enough, implementation and funding is insufficient.
- Vulnerability of people and ecosystems differs substantially, the most vulnerable people and systems are disproportionately being affected.

- The most effective adaption is integrated across governance and is inclusive.
- Mātauranga Māori and collective action have a strong role going forward.
- There is potential for maladaptation, an inadequate response if actions are too narrow or short term focused.

The report highlights that a step-change is required in our response to climate change – and it is needed now. Any further delay will miss a brief and closing window to support a liveable future.

Transitioning to a resilient, low-emissions society will require leadership at all levels of government. Your council's contribution to the Joint Committee (and earlier signature of the Memorandum of Understanding to work together on climate change) are an expression of that leadership. We urge you to consider what other action you can enable through your Annual Plan – whether accounting for your organisation's carbon emissions, responding to the priority climate risks you have identified, enabling active transport in your district, or in other ways.

We look forward to continuing to work with you to respond to this challenge in the years ahead.

Nāku noa, nā,

Rachel Keedwell

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

Like many residents, I regularly recycle all my waste at no cost to us. The amount of waste I personally put out for collection is miniscule and would not even fill an 80 litre bin in 3 months. Why should those many responsible residents have to now pay for a kerbside collection simply to subsidise those residents who can't be bothered doing the same? That is what this is about - penalise the responsible residents to subsidise those who are negligent.

Question 2: Food Waste Collection

No food waste collection - status quo.

The amount of food waste out of my household is miniscule. Most of it is composted. I resent having to now subsidise those residents who can't be bothered recycling their food waste responsibly.

Further comments

These charges will not remain as they have been proposed. Already they have increased and that is over a year before they are implemented. This will only continue to rise every year. There is NO doubt about that. This proposed "all-in" method is penalising the responsible residents while rewarding those who can't be bothered.
The comparison with other councils is irrelevant to our city. This is not a competition. We need to do what is appropriate for our city and its residents.
It also needs to be considered how much impact these tiny contributions make to global warming. Is it good value for money? That is debatable. Without getting into a heavy debate on this subject, we can spend all this money on this method of recycling at massive cost to ratepayers. But, for what gain? Other than a feel-good warm fuzzy there is virtually no gain considering NZ's portion of GHG emissions is less than .2% of the world's contributions. Has a cost/benefit analysis been completed?

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

For those of us whole already recycle everything, compost veggies and fruit, run worm farms, and practice organic principles there is absolutely no reason to initiate this. An opt out option must be considered!

Question 2: Food Waste Collection

No food waste collection - status quo.

We do not add food waste to our rubbish, everything is either composted or added to a very efficient worm farm.

Further comments

As with all council activities, costs will run rampant and there will be little, if any controls. Educate the public and provide another recycling centre. Stop trying to tax the heck out of everything.

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

Currently Waste Management charges $82 p.a. however going to the recycling centre monthly works for us.

Question 2: Food Waste Collection

No food waste collection - status quo.

Have an insinkerator so why pay for something that's free

Further comments

If you want more organised kerbside collection you need to reconsider costs as we already pay $6000 in rates and this should cover rubbish NOT be an additional charge

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

i do not produce as much waste as i am a conscious consumer .

I am a single person household , but i will pay the same cost of a waste bin that a larger household. This is inequitable.

Small dwellings will subsidise larger households for the waste collection costs.

i have a steep drive and can not physically lug a large plastic bin up and down steps. the bin will have to remain on the pavement potentially blocking foot traffic or being stolen or vandalised .

the council has made no efforts to minimise waste in the city and i do not accept the waste will be recycled . The charge is simply a council tax with out as yet a proven bases.

Question 2: Food Waste Collection

No food waste collection - status quo.

i do not produce as much waste as i am a conscious consumer . i compost effectively my food waste.

I am a single person household , but i will pay the same cost of a waste bin that a larger household. This is inequitable.

Small dwellings will subsidise larger households for the waste collection costs.

I have a steep drive and can not physically lug a large plastic bin up and down steps. the bin will have to remain on the pavement potentially blocking foot traffic or being stolen or vandalised .

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

I already do my own recycling and would actually find kerbside collection more inconvenient than what I currently do. People should be encouraged to use the waste management centre.

Question 2: Food Waste Collection

No food waste collection - status quo.

Make this available at the waste management/recycling centre.

Further comments

As a single person household I already find rates (well over $3000) far too high.

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

I pay $3.30/fortnight for rubbish collection. The proposed recycling would cost $7.50/fortnight, an increase of 227 percent. And this is twice what was estimated a few months ago. Why should I believe this estimate? You should provide a cost analysis. If you impose this cost, will you compensate for it by reducing funding in other areas to keep the rates down? If not, how do you expect the poorer people to pay, especially with increasing inflation - it is a regressive tax - everyone pays the same regardless of income - not fair. There should be an opt out, but you will know that, given a choice, many would not participate. The poor have to subsidize the well-off.

Question 2: Food Waste Collection

No food waste collection - status quo.

Pointless. Very small amounts, many people already compost, and the environmental contribution is not even trivial. This must have an opt out. Apply common sense rather than ideology.

Further comments

Tell us what happens after the collection. Who sorts it? Where does it go? How much does it cost to transport? Is there a market for it? (History of rejection by third world countries and diversion to landfill - there is a long history of failure to actually recycle). Another point: after the last survey, done only a few months ago, the results were not counted up and published. All we got was an article in The Whanganui Chronicle written by a strongly pro writer which said the result gave strong support. I looked at the actual submissions on the council website, and the result was mixed, with the majority against the council being involved in waste collection at all. Collecting food scraps was strongly rejected. Come on now, do this transparently, and if the public doesn't want it, accept their decision.

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

I somewhat reluctantly support this option as I recycle at the moment and only put out a rubbish bag once a month to every six weeks. An additional $200 (estimated) on my rates p.a. is considerable and I'm sure will increase over time. However it appears the writing is on the wall that local government will be required to provide this service in the near future and it will also hopefully draw in many people who currently, for whatever reason, do not recycle.

Question 2: Food Waste Collection

Council provides kerbside food waste collection from 1 July 2024 through a targeted rate at an estimated cost of $61 per year(or $1.17 per week), per household

Further comments

In your documentation you make the point that our rate increase this year is lower than many Council's however, no mention is made that our overall rates are higher than many other places to begin with.

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

The emphasis needs to be on reduction of all waste, including food waste.
Council has supposedly committed to addressing climate change. Kerbside recycling collection looks like a feeble attempt to be seen to doing something. Is Council able to produce data showing that implementing kerbside recycling has worked elsewhere. The current rates are a burden to many Whanganui residents, we do not need further increases.
Besides, even if the amount of waste to landfill is reduced by implementing Option 1, the per tonne of waste received and 'processed' waste management contractors and landfill operators will be adjusted to ensure their income and hence 'return on investment' is maintained.

Question 2: Food Waste Collection

No food waste collection - status quo.

As for Question 1

Question 2: Food Waste Collection	
Please provide any comments in support of your answer to Question 2:	
General comments and feedback. Please use this space to provide any further feedback or comments you wish to make:	Kia ora, For households who compost food waste, there needs to be an opt out and an adjustment / rebate to our rates bill. We are one of those households who compost food scraps (except for meat scraps which amount to very little and are feed to our son's pet dog). Leftover food is generally refrigerated to reheat or 'recycle' in a meal variation of the original. WDC proposal encourages or even promotes waste at a time when reports suggest the cost of food in rising rapidly. The proposal is deeply flawed, it is bizarre. It is a copy and paste of what other boring non thinking Councils are adopting elsewhere in the this country. Please do not deliver us a Food Waste Bin – I want to save the waste of my time in returning it to Council. Ng mihi nui, Trevor Stratton

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

having make our general public responsible for separation of their items is making them more aware of how we utilise what we use= kerb side recycling will make them lazy, we provide a collection service for the elderly and schools but do not publicise it enough for those unable to go to the centre - we will lose more of our recycling due to contamination in the use of kerbside collections, and the centre is so well patronised

Question 2: Food Waste Collection

No food waste collection - status quo.

we personally compost all our food waste and would not utilise this and I expect you will find very few people would seperate their food waste with the kerbside

Further comments

IF IT IS NOT BROKEN DO NOT FIX IT - what a waste of money this is going to be to implement-- and my rates are just astronomical as it is-- I do not want to participate in this kerbside - I pay for my garbage collection separately as it is due to the inadequate council management , and I have to be accountable for my purchases- get rid of plastic in our community would be a greater contribution to our environment- GIVE US A SOFT PLASTIC RECYCLING FACILITY WOULD BE ON A GREATER ENVIRONMENTAL BENEFIT, MATTRESS REPURPOSING-- AS THEY DO IN AUSTRALIA, ETC,

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

For a start I do not have enough recycling to warrant the extra cost and prefer to take my own recycling to the centre. My rubbish collection is fortnightly and do not require a weekly collection - a waste of money for me to change to weekly.

Question 2: Food Waste Collection

No food waste collection - status quo.

$61.00 per year, for food waste that I do not have and would not use this collection. For me on a pension this is a waste of money

Further comments

$61.00 per year, for food waste that I do not have and would not use this collection.
+ $134.00 per year for recycling
+ $106.00 per year for greenwaste
+$106.00 per year for everything else that is not recycling = double what I'm paying now
My envirowaste/greenwaste is collected fortnightly, that is all I require NOT weekly,
all this on a pension, with every living cost skyrocketing, not to mention that every year my rates go up a minimum of $100.00 a year. Soon you will be pricing people out of their homes and they will not be able to afford to rent in this time either

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

Even though your suggestion of kerbside recycling is politically correct, and in theory a good thing to do, I wonder if you really have done the numbers correctly? Kerbside collection might increases the waste to landfill as now everyone sends out more rubbish, and not everyone will sort correctly. How about the cost to operate the recycling facility? and what to do if there is no market or option of sending the collected recyclables on wards? Currently I recycle all possible items by visiting the recycling center 6 times a year, and put out a rubbish bag 6 to 8 times a year, hence my cost is under $50.00 a year for rubbish disposal, less than $1.00 a week! Your estimated cost is sure to increase, it will mean a lot more truck traffic on the urban road network, and in general it will mean that residents of Whanganui will not take responsible for their own rubbish - but expect "someone else to do it for them"...

Question 2: Food Waste Collection

No food waste collection - status quo.

Has Council done a study or qualified research to see if this is really an issue, if there will be enough waste generated, and if the higher truck traffic volume on road network - and the (extra) rubbish generated really is a better solution than status quo?

Further comments

I am the "Waste To Energy" guy, I really do hate the idea of sending waste to be compacted and stored for 1000 of years in land, out of sight, out of mind, until something is leaking or being discharged, or washed out - becoming a much bigger problem than ever thought. I would still like to promote the idea of the 3 or 4 neighboring Councils joining forces to built and operate a modern "Waste to Energy" plant where waste is dealt with once and for all, where pollutant discharge is minimal compared to current options, and out-put is energy, which can be directed back to the community or sold into the national power-grid. I am amazed, that our elected Councillors can not see that waste will not go away, or be minimised in the future - on the contradictory. Hence, if this Council act now - you will be one step ahead of the rest of the country!

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

The key issue for me is that while recycled material is collected there is very little real recycling of these materials. From what I understand no company in NZ is recycling carboard and it's being stockpiled. Aluminium cans are recycled and probably to some extend glass. But the rest was being sent to China and that's been stopped.

Question 2: Food Waste Collection

No food waste collection - status quo.

I compost my food waste and do not want an additional rated service that I am forced to pay for. A fixed income makes means services I don't use are a drain on my funds.

Further comments

The main purpose of my submission is to have council investigate, determine a solution and implement it for the drainage issues between about 32-44 Karaka Street, Castlecliff.

At about 34 Karaka Street the footpath is always covered in water the the berm next to the road is boggy. You have to walk on the road to get around this section of the footpath. Its certainly dangerous for the elderly. Except for some parts of summer this area is wet and impassable. There are several open drains on people's properties (including drains with small fish in them). They are a breeding ground of Mosquitoes .I understand the residents at 40 Karaka have to run a pump to manage the water on their property. With increased rain events expected associate with changing weather patterns this drainage problem will only get worse.

A drain(s) were installed by council before I moved here and Council has had issues clearing these drains frequently enough. After a formal complaint the drain was recently cleared to specification but given but there is still water in the street and free flowing in drains the current drains are ineffective. The drainage in this part of Karaka Street needs to be investigated and a proper solution identified and acted on. Specific funding needs to be allocated to ensure this happens.

The health and safety issues with current drainage include:
1) the footpath being slippery and the berm boggy requiring walking on the road
2) slippery surface for anyone but more importantly for the elderly
3) unmanaged open drains with flowing water, growth of algae with unknown health risks

Being a cynical person I'm sure if this was happening at St Johns Hill it would have been resolved long ago. This part of Karaka Street is just down the road from Rangiora Street that forms part of Whanganui's submission to most beautiful town. Well open drains of stagnate water is defiantly not adding to this good look.

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

What does the receptacle you're planning look like? You are asking us to accept something sight unseen. Bit light on information, so I can't say yes. I'm concerned that we live in a place where dumping rubbish is the norm & a recycle bin will be just another vehicle used for dumping. I would prefer the European model where you have convenient stations that you take your waste to local shared receptacles, not wind blown dumping on the berm, ending up in the river, in our parks on the road.

Question 2: Food Waste Collection

No food waste collection - status quo.

Good god, food waste should be discouraged. If you need a bin per household for food waste there's something wrong. Better spent on providing a composite bin per household.

Further comments

I think schools should be targeted to try & get rid of the intergenerational dumping rubbish mentality. 2022 & people dump rubbish in public spaces. CCTV I say at hot spots. Go help these people!

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

Question 2: Food Waste Collection

Further comments

I realise the importance of the need to recycle. The current recycling option in Whanganui is fantastic. The recycling centre is well run and readily available. I realise not everyone has the ability to use the centre due to various reasons. I live in a small cul de sac in springvale. Currently their are 4 companies that pick up waste bins in our street. The road surface takes a hammering due to this. Add another large vehicle to the waste pickup service (ie from proposed new service) and we make things worse, not to mention overuse of fuels etc.
I don't want this to sound like a "nagging neighbour " story, it's just bare facts.
The current system is brilliant.
Thanks

KEY ISSUES

Question 1: Kerbside recycling

Question 2: Food Waste Collection

Further comments

Firstly, thank you for the opportunity to comment on the proposed plan and in particular the proposals for kerbside recycling and food waste collection.

I commend Council for initiating discussion on these topics and a proactive approach. These are important issues in respect of addressing the causes of climate change.

However, it was disconcerting to see a letter to the Whanganui Chronicle from a Council officer , in response to correspondence to the Editor, which gave the impression that the proposed scheme was going to be implemented. There was, to my reading, no caveat in the letter to indicate these were only proposals at this stage. Taking the officer's letter at face value would suggest that submissions are a pointless exercise as the decisions have been made. My belief is the Whanganui Council is better than this and I trust all the submissions are shared, in full with the elected representatives.

The proposals need to be seen in context. New Zealanders are facing record inflation and an increasing number are finding it difficult - in the extreme - to balance their income and expenditure. This would be particularly true for those on fixed incomes or in low paying employment. It has been noted on national news reports that wage increases are not keeping pace with inflation and again this would be a factor for groups unable to "negotiate" significant income increases. The prospect of adding further charges to some groups in our community without thorough analysis would be demoralising to members of those groups.

There are a considerable number of people using the recycling centre and whilst some would no doubt be in a position to meet the charges, I would submit that some are not in such a position but are currently endeavouring to "do the right thing".

The discussion document rules out an opt in - out scheme on the grounds that it requires everyone to contribute to minimise costs. Again, no reference to those with no or limited ability to pay. Nor is there any detailed discussion of such any option.

Clearly an opt in - out option would require a compliance regime to limit opportunities for abusing the system and other rate payers. However it is suggested a community education programme – perhaps in conjunction with an existing community group – would achieve the objective of increasing recycling and reducing waste and be inclusive of those in the community for whom a rate based charge would be unaffordable.

It is acknowledged that Council are proposing to keep the next rate increase to 3.9% according to the discussion document. But it also indicates the average increase for residential properties, for recycling and food-waste collections would be 4.1%. So the total increase would be in the order of 8%.

I suggest that the proposals require a detailed and thorough options analysis and presentation of facts to the public, to a degree significantly greater than the comments in the discussion document.

KEY ISSUES

Question 1: Kerbside recycling

Question 2: Food Waste Collection

Further comments

I see nothing about upgrading the poorly planned and inadequately maintained foot paths in Whanganui. This is an issue for older people, who tend to drive less as they get older, so use the footpaths more. There is no standard for footpaths in Whanganui - this includes the gaps, between pavers, unevenness and lack of maintenance. Other Councils do have these standards, but not Whanganui.

KEY ISSUES

Question 1: Kerbside recycling

Question 2: Food Waste Collection

Further comments

I currently recycle all our food waste by composting and therefore have no requirement for food waste recycling. I would suggest that where possible residents should be encouraged to recycle food waste into their gardens to enrich the soil and enable the residents to grow they own produce.

I currently recycle cans, paper, cardboard, glass and plastics 1,2. & 5 through the recycle centre. I would suggest that all plastic containers be required to be made of plastics that are recyclable. Currently I and putting plastics that are either not numbered or do not bear a number that is currently being received by the recycling centre, into general rubbish disposal. These are mainly No.6 plastics (yoghurt containers).

My general rubbish disposal normally amounts to one rubbish bag per month and I am happy to purchase rubbish stickers to enable this be disposed of through the current system.

I therefore do not support being levied with further costs for services that I do not require.

Role	

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

I do my own recycling once every six weeks approx.

Question 2: Food Waste Collection

No food waste collection - status quo.

I do my own composting and do not throw any food wastes out.

Further comments

I think the cost is unjustified for someone in my position who is a one person household and does there own. I would spend very little in doing my own. Please consider those people like myself and don't just go ahead and do what the council wants.

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

Question 2: Food Waste Collection

Option 1 - only if requested.
All my food waste is a needed part of my compost heap.
Perhaps exemptions could be given.
Renewed annually when paying rates?

Further comments

Whatever happens, I will continue to compost my food scraps.

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

I think it is disappointing you're not recycling everything.
My aerosol cans and household batteries will now go in the rubbish!

Question 2: Food Waste Collection

No food waste collection - status quo.

I have no food waste. I thought half the country was going hungry so there should be no waste!!
I do not want a bin. I only have a small place & don't need any more clutter thank you.

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

All my recycling items go to the recycle depot Maria Pl. on a six weekly cycle.
Cost per visit $2.00 plus ten minutes of my FREE labour.

Question 2: Food Waste Collection

No food waste collection - status quo.

My food waste (should there be any) and of course there "is not any" would go on my compost/bins or worm farm, with my vegetable garden green waste.

Further comments

Why? Do I have to pay an extra 5 plus % on my rates for EVER, for a service I "do not require" or want.
If? Commercial entities can choose "to opt in, or out" why is it that the residential rate payers "CAN NOT"?
Maybe, Mayor Hamish can answer that question.
Also - Page 16. Food Waste collection, that $865k is incorrect should read $933k - seems your abacus has lost a few beads? Check with Sarah O'Hagan. Embarrassing!!

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

We use the recycling depot in Maria Place for all our recycling.
The cost is Nil and its done once a month when we are going to town.

Question 2: Food Waste Collection

No food waste collection - status quo.

We grow most of our vegetables and use any food scraps etc for compost.

Further comments

It should be user pays and dont penalize the rate payers who are all ready recycling and composting.
The cost wont remain at the price quoted now. It will increase each year.

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

Why don't you subsidize general waste collection before offering yet another recycling scheme . I have been apart of these before in our city and they just don't last. It doesn't get sorted properly and ends up in the landfill anyway.
Whanganui is lagging behind the rest of NZ with no subsidized wheelie bins. We also already pay higher rates than most other parts of the country. Stop being such Muppets and solve the issue of rubbish being dumped left right and centre before worrying about the collection of a little bit of pig food. □

Question 2: Food Waste Collection

No food waste collection - status quo.

Subsidized wheelie bins. Or something to lower the price of rubbish disposal.
Why bother collecting food waste, what people are really going to separate food waste from general waste unless they have pigs. And those people won't want to hand it over to start with.
Brain dead ideas from an incompetent council.

Further comments

Subsidize wheelie bins or do something to lower the price of rubbish disposal in whanganui.
Another failed recycling scheme and pig food collection aren't helpful or useful ideas to help our city.

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

In many households the quantity of Items that fit the recycling criteria would not be sufficient to warrant a such a weekly charge. In the case of my household the annual cost of $134 to collect and recycle the contents of no more than an annual total of ten bins is outrageous. I recycle my household's small quantity in a far more economical manner.

Question 2: Food Waste Collection

No food waste collection - status quo.

Many households have zero or minimal food waste. Composting of leftover food scraps is common practice. Again do not saddle homeowners and ultimately tenants with additional costs over which they have no control.

Further comments

Kerbside recycling collection and food waste collection should only be introduced as an option for all homeowners and those that occupy rental accommodation. Many households have minimal recycling and zero food waste. These collections should be a user pay service as is the general refuse collection.

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

I already recycle tin cans, cardboard, glass and most plastics regularly at the Recycling Centre in Maria Rd Extension. I cannot drive so fill up large bags to take on the bus. As a 70 year old, I am fit so if the weather is good, I walk to and from the Recycling Centre using a 4-wheel trolley to carry recyclables. I am quite happy with this arrangement and welcome the exercise.

Question 2: Food Waste Collection

No food waste collection - status quo.

Fat and bones go into the green bin from Envirowaste but all other scraps go into a Bokashi bin which is a style of fermentation. When full, it goes into the ground. Bokashi was a system expounded by Auckland City Council. I have been here 9 years and it works well in my back yard. There is very little food waste.

Further comments

My congratulation go to Whanganui for an excellent recycling depot.
When I bought this property in 2013 I had to get a bulldozer to remove buried iron, timber, plastic fencing, concrete and other household rubbish, quite hazardous to walk on. It was the only way I could put up new fencing. But truckloads of debris had to be removed before the work could go ahead. I am still uncovering rubbish.
May I please request an inorganic collection because it appears that people are burying their rubbish. Perhaps it is too expensive to remove.

2022/23 ANNUAL PLAN – HORIZONS' SUBMISSION

Thank you for the opportunity to provide feedback on Whanganui District Council's (WDC) 2022/23 Proposed Annual Plan. Horizons Regional Council (Horizons) values the strong relationship it shares with WDC – the relationships between the region's local authorities will be vital as we work together to identify and realise opportunities to assist our communities in their recovery from the impacts of the COVID-19 global pandemic.

With regard to your proposal to introduce kerbside recycling and food waste services, Horizons acknowledges that WDC's aim is to reduce recyclables and food waste to the landfill and decrease individual trips to recycling sites. In addition, a kerbside collection service will result in more material being recycled and composted. Climate change is one of the most significant challenges facing New Zealand, our region, and our communities. Transitioning to a resilient, low-emissions society will require leadership at a local level. Both aims of the proposal are beneficial to climate change due to the reduction in greenhouse gases that will result from less food waste in the rubbish, and the reduction of individual travel to recycling sites which means less vehicle emissions. Moreover, it supports good individual choices by encouraging and enabling long term change.

Horizons is supportive of the proposal and commends WDC's initiatives to demonstrate climate action and decrease emissions. We look forward to continuing to work together to identify and respond to community needs.

Horizons does not wish to present its submission at the annual plan hearing.

Yours sincerely,

Michael McCartney

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

I'm from Toronto, Canada and kerbside recycling is something I have very much missed! it makes recycling so much easier, and therefore more likely to do. it fits into our busy routine and helps stop piling up for glass, etc.

Question 2: Food Waste Collection

Council provides kerbside food waste collection from 1 July 2024 through a targeted rate at an estimated cost of $61 per year(or $1.17 per week), per household

we have a compost in the back and it seems to bring a lot of cats, mice, etc. so it would be nice to be rid of it or alter it specifically for compost for gardens.

Further comments

very excited this is being discussed!!!

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

I purchase little or no product which requires recycling. That product which cannot be reused I am happy to take to a recycling depot myself.
I cannot justify the weekly cost which would be levied.

Question 2: Food Waste Collection

No food waste collection - status quo.

Again, I have little or no food waste which I cannot compost and therefore would not have need of a food recycling service.

Further comments

I am against a citywide recycling service.

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

I would request a reduction in fees for the elderly living alone

Question 2: Food Waste Collection

No food waste collection - status quo.

I would support option 1 only if there were no cost, otherwise I compost my own waste

Further comments

There are so many costs being added to our existing cost of living that many elderly or families already living in deprived regions that many cannot afford the costs.
There is inequity between the single cost for large families and a person living alone.

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

For those of us who already recycle all our glass, plastic, paper, cardboard, tins, etc, it makes no sense to me for the Council to spend all those extra dollars on kerbside recycling. I like the existing system, as it encourages people to do their own sorting. So they can save money by their own efforts.

Question 2: Food Waste Collection

No food waste collection - status quo.

I prefer to compost my food scraps. This is by far the cleanest and environmentally sensitive way to organise the household food waste. I hate to think what bins that have been sitting in the sun for a week or two would smell like! I think they would be quite a health hazard.

Further comments

I do not wish to pay more rates in order to get these two services that I do not want!

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

For the sake of hopefully getting more people to recycle. That being said, i do think its good for those of us who can access the recycling centre to use the facility as it makes you more aware of what can be recycled and how, and can then make better choices like avoiding buying certain packaging that cant be recycled. I think its good to take that responsibility - but realize there are access barriers.

Question 2: Food Waste Collection

No food waste collection - status quo.

Again, mixed feelings as we do home composting. Possible there are things thay can go in kerbside that i wouldnt put in compost like meat, bones? I would prefer optional.

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

I am happy taking responsibility for taking my recyclables to the recycling center. I therefore object to additional rates load for a service that I will not use.

Question 2: Food Waste Collection

No food waste collection - status quo.

The premise for the change is false. Converting food scraps, regardless of whether landfill or composting scheme produces greenhouse gases. Unless the composting scheme will capture the gases and use for energy or other then the greenhouse gas reduction argument fails.
I acknowledge the benefit of diverting food scraps so that something useful like compost is generated.
However, will council take responsibility for risks of feral animals etc raiding containers etc to access the scraps?
Further, there is no mention of how or where council intends to process scraps/compost. Given the current issues in Bromley, Christchurch has council given sufficient consideration to these matters to ensure that ratepayers are not impacted by the activities of potential plant?
Further, I already fully compost all food scraps and most of our other green waste on property for use in garden. Green waste that is not processed on site I already pay for disposal. Therefore, I object to additional rates load for something that I will not use.

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

We already recycle all our cardboard and Plastic. We own 4 units on our property and supply 2 big bins for rubbish that gets collected weekly. Under the proposed scheme those costs will be passed onto each tennant. There is no way they will fill each bin and under the new scheme they will be forced to pay more than they do now. We have older tennants who will be unable to lift the buckets. We will still have to have general rubbish bins so the service you are offering is only half filled . I recently lived in Timaru for a year and they have 3 bins per house hold- Red for general- yellow for cardboard - green for green waste. The flat I lived in had 6 other rentals..not one of them put their bins out and on collection day all you saw around Timaru were rubbish bins. This made the place look like one big dump and once emptied they were scattered all over the road, moreso when it was windy. It looked disgusting and made the town look dirty. Certainly wasn't a good look. We used to have a kerb side collection years ago that we had to pay for in our rates , once it was removed we didnt get a rate reduction and now you are wanting to re build the wheel. I am totally against the introduction because at the start you say its cheap but years on, we will get loaded with cost increases year after year just like everything else council has a finger in. We already have good rubbish collection services. Leave it alone. Our rates are one of the highest in the country !!

Question 2: Food Waste Collection

No food waste collection - status quo.

We already cater for our tennants with 2 bins weekly collected

Further comments

You are forcing many single older folk who probably dont even fill a bag every 2 weeks to pay more for something they already have. As far as the bins you are proposing, because we have 4 units we will be required to house 8 new bins along with what we currently have. They will just be a absolute eyesore. Totally against unless you can guarantee no cost increases for next 10 years!!

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

Wow, $136 per year for this service when there is already a free recycling service. It makes no sense. Whanganui would fall in line with national kerbside recycling services (finally) and maybe this will be the explanation used for introducing the service. Council have already indicated that kerbside recycling is the preferred option and this very certainly suggests this consultation is to show moderators things have been done appropriately and consultation offered . Those families in affluent areas may find the kerbside service convenient and it may serve this community well and then again it may not . For families in lower socio economic areas, every penny counts and it absolutely feels like a disconnect between Council and those in this community struggling to make ends meet. If you are in any doubt spend some time in these areas: Talbot Street, Wembley Place, Hinemoa St, Kaka Pl, Kiwi Street, Paterson Street, Matipo Street, Puriri Street. Talk to your community, go door to door. Meet us! It feels like Council don't care about our area and Police are too scared to show a presence here for fear it may intimidate the gang population in the area and it may, but it shows those living here that we're valued and cared for. In the absence of care gangs are recruiting and it's everyone's problem. We are not caring for these communities and the gangs are reaping the absence and stepping in. This proposal while disguised as ecologically responsible is not and will not help those already on struggle street. It appears that the Ivory Towers are blind to those beneath them at least this is my perception.

Question 2: Food Waste Collection

No food waste collection - status quo.

Questions maybe raised as to the financial benefits Council may take from this money stream. Given the free service already in operation in Whanganui I am confused as to the proposal. There appears to be little discomfort to decision makers implementing this proposal. Please remember, for my community it is an issue. People are living in poverty in my street and it's really hard to make ends meet. There appears to be a serious disconnect between Council and those of us living in the poorer areas of Whanganui.

Further comments

There are some really good people on our Council whose intentions to see our City thrive is very real. More recently, I have been very concerned around some behaviours of Council representatives. I recently raised concerns with Council about a drainage issue on my street that my neighbours had informed were advised by Council that the issue was not Councils responsibility. The matter was dealt with after a 6-7week wait and I was called by someone who explained Covid delays were the cause and that the matter would be dealt with. My email to Council on the matter follows: There is a road drainage issue around the gutters outside 47a Wembley Place. It appears that the culvert is not working. The issue has been 4 weeks now and serious questions maybe raised as to the reasons for the lack of progress. Questions around if the same slow progress would occur in the Saint John's Hill area given an identical issue. The failure to respond and correct the issue or liaise with the homeowners builds a picture of racism. The majority of this community is Maori. I am aware of Covid impacts and take this into consideration. Please see the matter is given more care. It certainly builds a picture of racism.

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

This would be excellent! While we as a family visit the recycling centre I know of a number of families who don't - and simply put their recyclables to landfill. This is only a tiny step in our responsibility to caring for our environment.

Question 2: Food Waste Collection

Council provides kerbside food waste collection from 1 July 2024 through a targeted rate at an estimated cost of $61 per year(or $1.17 per week), per household

Again, fantastic initiative for climate health. We compost, but understand this isn't in everyone's desired way to use their time. This is an excellent option. Any way we could get it done sooner? Thank you so much for these initiatives.

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

Question 2: Food Waste Collection

We pay for rubbish collection at a cost, plus work hard at recycling and composting. Our rates are unbelievably high and any extra cost is punishing good people doing their best. All costs are increasing, cost of living is increasing and families are finding things more difficult funding many who don't really care anyway and rubbish /composting/recycling is the least of their worries.

KEY ISSUES

Question 1: Kerbside recycling

Question 2: Food Waste Collection

Further comments

Our submission is solely to do with the frequency of collection. We are a two-person household, both in our eighties, and we are diligent in our recycling efforts. However, we're well-catered for at present with a fortnightly bin for collection, plus a trip to the Recycling Centre every 4 – 6 weeks. There must be many others in a similar position, not wanting to have to participate in a system designed (and priced) for households of 4, 6, or more people. Surely there could be a fortnightly option?

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

Question 2: Food Waste Collection

Council provides kerbside food waste collection from 1 July 2024 through a targeted rate at an estimated cost of $61 per year(or $1.17 per week), per household

Further comments

These two collections should be optional.I have my own composter also I recycle , both of which I have been doing for years .that would be $195 a year which i don't need to spend. Otherwise it's a good idea.

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

Can't see this working, there is quite a bit education involved in teaching people how to recycle and leaving it up to all of us by ourselves seems to be a recipe for disaster.

Question 2: Food Waste Collection

No food waste collection - status quo.

Not sure how many people actually need this service. Many households have either 'insinkerators', chickens or a compost heap - can't see the need to add that cost to the rates bill.

Further comments

I think the cost is too expensive. We have a good system already and I feel money would be much better spent in adding a support service to existing services for those who are not able to go to the recycling centre.

A lot of education needed. Otherwise people will take advantage. There will be a lot of rubbish in this. Like to see a questionnaire again for pensioner flats.

Question 2: Food Waste Collection

No food waste collection - status quo.

People will take advantage of this and put rubbish in it.
Dogs will scavenge through this & rats.

Further comments

Need to have bigger bins on the riverboard walkway down where the markets are. They're overflowing.

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

this would be great - happy to pay for it

Question 2: Food Waste Collection

No food waste collection - status quo.

I compost my food waste. I think a neighbourhood composting plan could be more effective.
We are not an urbanised city - there is room for composting green/vegetable waste. If anything, I would prefer a green waste recycling programme for garden waste.

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

Kerside recycling will make it a lot easier for everyone, especially those with mobility issues.

Question 2: Food Waste Collection

Council provides kerbside food waste collection from 1 July 2024 through a targeted rate at an estimated cost of $61 per year(or $1.17 per week), per household

Please do what you can to reduce rubbish to landfill. While i probably won't use it much, being a gardener, I can see the value for others, especially those who need support to live in their homes - hopefully they can reduce the size and frequency of their private rubbish service. Also, given fertilizer prices it's overdue that we come up with kiwi solutions.

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

This is long overdue. It should encourage people to recycle as it's more convenient. It will also enable those with mobility issues or no access to transport to also recycle.

Question 2: Food Waste Collection

Council provides kerbside food waste collection from 1 July 2024 through a targeted rate at an estimated cost of $61 per year(or $1.17 per week), per household

I think this is a good idea in theory. In practice, the bins seem very small and likely to be easily blown down the street in a moderate wind and easy for animals to get into (because some of those bins are going to absolutely reek and be an undeniable treasure trove for both dogs and cats, especially if left out overnight).

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

Goodmorning,
I am so glad to have received this information just in time to comment.
My husband and I have recently moved to the Whanganui area. We were not aware of what your rubbish collection process was and currently PAY for a bin for our waste disposal and as you have a really great recycling centre in Whanganui, we do far more recycling now than I have done before.
So .. we would be interested especially if the overall costs would be no more than your estimated costs at no more than option 1 in question 1 and Option 1.
About us, we are two adults in our mid 60's, we recycle most things like glass, plastics and cardboard / paper and hire a bin from low cost bins.(I prefer bins to bags)
Although we are currently renting we have the opportunity to buy after a year so will become house owners and would be taking even more interest in the costs of rates and what they included. I really like how you have your recycling centre in town, so I would like a few questions around your new service.
1. Woud the recycling centre still be available?
2. With this new kerbside recycling collection.. Would these be open or closed bins?? With plastics during winds etc they could cause more issues with rubbish being blown all over the place. With this in mind I think my preference would be to recycle my glass etc there, separating food scraps (what little we do have from time to time, most goes to the dogs and only a little being put in the rubbish) however taking into account some peelings etc, I would prefer to have a compost bin of my own to recycle into the garden as I begin to build them up as well.

Question 2: Food Waste Collection

Further comments

I have been a part of a council feedback on rubbish collection in Auckland when I lived in a rural area and I know you can not make everyone happy but if you can get the majority interested for the greater good of our environment, your doing well.

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

Question 2: Food Waste Collection

Council provides kerbside food waste collection from 1 July 2024 through a targeted rate at an estimated cost of $61 per year(or $1.17 per week), per household

Further comments

I am supportive of having kerbside recycling and food waste, however I would prefer it if this was on a pay as you go system or the option of being fortnightly. (We have a general waste bin that we only put out when it is full and order the pickup .) There are households with only one or 2 people who may not need to put recycling and food waste as regularly. It doesn't seem fair to have these people pay weekly when it may not be needed. Perhaps these people could have the option of fortnightly at the same cost, i.e. $2.58 per fortnight.
We compost most of our food waste, and use a worm farm, so we wouldn't need to use the food waste pickup hardly at all. This is great for families who don't compost. I would prefer it if households were given a choice and not told they have to have this service.

So fortnightly option for people who want the services and a choice of not having them if they don't want it

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

It boggles my mind that given the rates we pay are similar to the Wellington metro area , we don't have recycling and rubbish pickup already.

My wife is concerned that older people may not find it easy to move the recycling container to the curb.

Question 2: Food Waste Collection

Council provides kerbside food waste collection from 1 July 2024 through a targeted rate at an estimated cost of $61 per year(or $1.17 per week), per household

This should be done in conjunction with encouraging households to reduce and/or compost their own food waste.

Further comments

Why does our city not have a public rubbish collection like everywhere else? There are three private companies at the moment, which means three trucks driving all over the city, so three times the greenhouse gas emissions. If we had public rubbish pickup, there'd be one truck driving the street.

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

This is very vague,.
What will happen to the product collected ? How ?
Who will have the contracts ?
What could happen once the Government container scheme comes in ?

Question 2: Food Waste Collection

Council provides kerbside food waste collection from 1 July 2024 through a targeted rate at an estimated cost of $61 per year(or $1.17 per week), per household

Needs an opt out option with no charge, for those of us who have no organic waste leaving the property. (ie their own composting system and waste re-use. eg chooks, dogs)

Further comments

Long Term Plan Amendment 2022/23

We commend the Council for

- The response from the rubbish clearance team when requests to pick up specific rubbish. Dumping seems a continual problem in places.
- Increased partnerships with all local iwi.
- Developing a good working relationship with the health and well being of Te Awa Tupua.
- Promotion of Whanganui as great place to live, bring up a family and work.
- Supporting cycling with the continued development of shared pathways across town and along the Awa.
- The effort Council staff and Councillors make to try & get opinions from residents about proposed changes.
- Supporting Castlecliff Coast Care by providing plants
- Acceptance of Māori place names

- Appointing a dedicated Climate Change officer, to ensure system changes required are put in place, throughout WDC operations

- Youth Places and Spaces development:

We strongly support Council's actions to develop better options for youth.
With limited public transport options and the need to reduce the carbon parents burn driving their children backwards and forward across town, we suggest that suburb-based option activities are best.

- City development

Building standards should be changed so that cramming the maximum number of houses on a development is changed allowing all houses to be positioned to capture maximise solar warmth in winter.
Designs should ensure shading from summer heat, with insulation and double glazing being standard.

Rainwater capture needs to be part of all developments to slow run off and reduce piping to rivers and streams. The values of ponds/lakes and wetlands need to be recognised in all new and revitalising developments.
The Mill Road industrial area could have provided recreational facilities for the workers of that area with an attractive wetland, trees, and seating.
This could have captured the runoff from roofs and hard seal and been a good looking climate change mitigation instead of just another industrial area,
An opportunity lost.

England has the catch phrase "10 minutes to a pint (milk or beer)". Trying to ensure no one in towns is more than 10 minutes away from a grocery shop or a pub. Thus, reducing car dependence and improving community hubs. Whanganui could adopt a NZ type slogan, "10 mins to a park or a pie", when planning development.
We need parks and reserves that are easily accessed by families and elderly, as well as local shops within walking and biking distance.
We need larger shops & amenities to be on bus routes rather the needing to go everywhere by car.
Smaller local community hubs tend to be more user friendly and larger complex more impersonal.

Development and implementation of a Coastal Plan: -

Great to see WDC finally making some sensible progress on developing a long overdue coastal plan ?

To quote Dr Alister Clement, senior lecturer in the School of Agriculture and Environmental at Massey University - "Dunes define the coast of the southwestern North Island from Patea south to Paekakariki. This coastal dune field is the largest in New Zealand at around 950 km2 in size, with dunes transgressing inland as far as 18 km from the contemporary coast. For the future, the dunes of the southwest North Island represent a valuable buffer against the effects of climate and sea-level change driving erosion of the coast". (CRTNZ, 2021 Conference, our emphasis!)

Secondly, the "beach" is the most visited recreational asset in Whanganui.

What should be in the Coastal Plan ?
It should enact policies from the New Zealand Coastal Policy Statement 2010, especially policy 20, vehicle access.
It should support the objectives and policies of the WDC's Castlecliff Coastal Reserve Management Plan 2018.

It needs to select sensible suggestions and actions from the reports already commissioned by the WDC. Particular care needs to be exercised with the "desk top" eCoast report on Castlecliff beach.

Long Term Plan Amendment 2022/23

The plan will also need to especially recognise the lead in time required for eco-sourcing foredune sand binding plants, Pingao and Spinifex. Seeds collected in January/February is need to provide plants 16 months later for winter planting.

Projects that should be at the fore front of planning are:
1. Stabilising and redefining of the Mowhanau coastal area, using native sand binding plants, NOT hard structure solutions.

2. Retreating and elevating the Morgan Street carpark so it can become an attractive and appropriate facility.
Using this opportunity to remove Marram Grass and other weeds as the lower foredunes are reshaped and planted with sand binding Spinifex and Pingao and associated native plants.

3. Expanding the dune stabilisation work at the Morgan Street blowout.
An excellent start has been made with a joint WDC and Castlecliff Coast Care project, plus the community contribution at last year's planting days where over 100 people contributed their time. To really stop blowing sand onto Morgan Street more planting is needed.

4. Initiate foredune planting on the open areas of the Castlecliff Rangiora Street Beach, to reduce sand blowing on to the infrastructure, and thus reducing the associated costs of sand removal.
A small dune is already forming at the northern end of the beach, this could be secured from vehicle access with large logs and planted

Waste and recycling
We expect the WDC's revamped Waste Management strategy to provide a strong lead in this space.
Government Stewardship programs, developing circular economies and the necessary changes in packaging, are all examples of areas in which WDC and our community can move forward together.

Pay Council Staff the Living Wage
Post Covid 19 is a difficult time for people on low incomes.
We need Council to take an active leadership role in introducing the Living Wage into our local economy.
At the 2018 WDC submission presentations it was explained how a small community organisation had achieved introducing Living Wage. With planning it had increased rates of pay for low wage earners, while pulling back on wage increases at the higher end. Achieving a more equable distribution on the same wage budget.
Such strategies would mean this does not have to be an added burden to rate payer.

Cycleways
When resealing roads with cycleways the cycleway proportion could be sealed smoothly & in a different colour.
Smoothly for ease of cycling (and cycles aren't as rough on surfaces as heavier cars or trucks anyway). A different colour so everyone can see which part is actually the cycleway or shared pathway !

We realise that if a cycleway is put on the extended Fitzherbert Avenue, through Mosston Road into Mills Road and the under end of Manuka Street Castlecliff Rutherford Junior High students would have an easily accessible route to and from their Intermediate.
It could also be the beginning of a cycle path to the sport facilities at Springvale Park. These, disappointingly, seem to be most of the nearest sport facilities to Castlecliff these days.

PLEASE NOTE
This form is not NZ spell check.
Your gender option does not allow for more than one person making a submission. ie we are a Husband and Wife team
We don't believe NZ European is appropriate in this day and age.

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

This option enables everyone in the community to recycle with minimal effort.

I pass wheelie bins full of recyclable material on rubbish day in our street. I am distressed by this. Some households may lack capacity to recycle - but I suspect some households do not make the time to go to RRC.

Question 2: Food Waste Collection

Council provides kerbside food waste collection from 1 July 2024 through a targeted rate at an estimated cost of $61 per year(or $1.17 per week), per household

My wife and I are fully in favor of food waste collection. We compost, have a worm farm and are currently clients of Easy Earth. The Easy Earth service is wonderful and we wish it could be extended to all households. We make regular trips to the RRC. This means we put out a bag of rubbish once every six weeks.

I hope that food waste collection will be more widely accepted when people realise that food waste collection will collect material that is not compostable at home, like bones and meat scraps.

We appreciate Council taking a wider view of reducing methane emissions from landfill and in reducing the volume of stuff going to landfill.

Further comments

We are encouraged by the WDC's commitment to reducing the effects of climate change. Please persevere. You are doing excellent work.

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

While we recycle weekly at the Recycling Centre, I'm sure a lot of people don't, so this is why I have selected option 1 - for the greater good of the community and environment. I would be happy with this, as long as the bins provided are adequate (tall enough and covered), preventing rubbish from being blown around the street and stopping bottles from being smashed.

Question 2: Food Waste Collection

No food waste collection - status quo.

I'm torn with this response - I think I need more information. A portion of my work has been food rescue and redistribution of excess food, so I would hate to see people discarding food that can be repurposed. It would also be dependent on what would hold the food waste - how secure it is, i.e. preventing animals from accessing it, preventing it from spilling onto the street.

Further comments

The cost to ratepayers is always a sticking point

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

From previous experience the small open bins are not practical - if filled with glass they are too heavy for many people to move. I believe small wheelie bins would be better. A larger wheelie bin for plastic and paper and cardboard would work as many people now are recycling much more and these small bins won't be big enough.

Question 2: Food Waste Collection

Council provides kerbside food waste collection from 1 July 2024 through a targeted rate at an estimated cost of $61 per year(or $1.17 per week), per household

I like this idea however I believe it should be an 'opt-in' service for people to choose. Green waste is the same.

Further comments

I'm pleased that this council is looking to introduce this service s it should enable much more rubbish collection across society. It hopefully will help stop fly tipping. Please consider the people on fixed incomes as the rates will increase.

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

go to recycling center, once a month

Question 2: Food Waste Collection

No food waste collection - status quo.

unless you have an apartment compost your own.

Further comments

consumers need to pay a premium for large wheelie bins

KEY ISSUES

Question 1: Kerbside recycling

Council provides a kerbside recycling collection from 1 July 2023 through a targeted rate at an estimated cost of $134 per year (or $2.58 per week) per household

Love the idea of kerbside recycling, but our family recycles ourselves. Also, as a rate payer & with a rental, our cost will be double that price, which is not ideal.

Question 2: Food Waste Collection

No food waste collection - status quo.

Again, I want to exclude the food waste from landfill, but we have compost at home, so wouldn't use the service personally.

Further comments

My major concern is that the council invests capital in Easy Earth. They began the company when there was no other options/facilities here, & I worry that we will out Source this idea, rather than Whanganui being sustainable ourselves.

Further comments

I am vegetarian/vegan and any food waste I deal with on-site. I do not send any food to waste. However, I do not object to subsidising others so that food waste can be kept out of landfill.

KEY ISSUES

Question 1: Kerbside recycling

No kerbside recycling - status quo

Can already go to the recycling centre, it's wonderful place, and I enjoy the trip out. Compliments to the recycling centre, the service is first class. We don't need kerbside recycling, there's already too much of a burden on ratepayers. Don't think it will reduce rubbish as people will continue to throw out recycling in their wheelie bins. We need to educate young people about recycling.

Question 2: Food Waste Collection

No food waste collection - status quo.

Brought up when food is not wasted and any scraps I have go to the garden. I wouldn't use it. Already too much of a burden on ratepayers.

Further comments

Don't want any more diesel buses, not keen on big buses. The smell of diesel is horrible. Smaller buses are better. Absolutely against further big buses.

Further comments

Reference to Q1 & Q2
Though living rurally just beyond the Town Boundary and not currently in the designated areas referenced in the proposed Waste Plan Proposal, we wish to make a comment re prempting possible extension of the zones in the future. We manage our living such that we have less than minimal waste to recycle (average 1 standard rubbish bag ~ every 3 months) and any recycled waste is taken to the Recycle Cycle Centre in town on a given trip to town if and when necessary. Food waste is also less than minimal. Any waste (food) is composted or fodder for chickens. We would not support Food Waste Collection either if extended into our zone in the future.

Further comments

Long Term Plan Amendment 2022/23

Thank you for the opportunity to be able to make a submission on the proposed recycling scheme. I am new to Wanganui having recently moved across from a small town in Central Hawkes Bay. Naturally I am interested in what is going on in my new city or I should say town and when I read in the local news paper about the scheme I thought well I would like to make a few comments about this.

I am fully supportive of any moves to reduce rubbish that goes into landfill.

My first comment would be that instead of having just two ways of getting rid of our rubbish I.e. the curbside weekly collection which I understand is carried out by contractors and which I pay $3 99 for per bag and then also there is the recycling centre downtown which is or seems to be well patronized. So we are now creating a third means of disposing of our recyclables albeit not until next year.

So are we going about this the wrong way and instead of creating another system why not reduce it to one, by having one large container with separate compartments, all to be picked up at the roadside. Now this is just an idea and I really haven't thought too much (because of time constraints) about how that could work or how practical it might be. Maybe this sort of thing has been considered by council already. I do think though that of the many hundreds of people who use the recycling centre now many will continue to do so even after the new scheme comes into effect next year , because they will find it more convenient and maybe want to get rid of it before it is picked up at the roadside. I am thinking about folk who may go into town most days and wouldn't find it too much of a chore to just drop off their recycling at the same time . I would just like to add that there are plenty of recycling type of objects that are not acceptable at the recycling centre so would naturally go into the road side bags and subsequently to landfill. I'm thinking of for example, those odd pieces of plastic which are neither 1, 2, 5 or 6 or other things like those small dry cell batteries which we never know what to do with. So as I say landfill is always a problem for me even though I myself am a contributor to it. There must be a better way. I have lived in New Zealand for over 50 years now but when I was a youngster in the UK I remember our local authority had a big furnace type thing which us kids used to call the "dust destructor" and basically they burnt everything. Now obviously that can't be done these days because of the pollution from the smoke etc. but surely there must be a way of disintegrating rubbish to ashes without interfering with the environment. Something for the scientists I guess and for future schemes.

With the food waste system coming into force in 2024, I understand there will be two bins issued one of which will go into the kitchen to be used on a daily basis and the other bin will be a lockable one which will be picked up at the roadside presumably once a week. Not sure though how it will all work.
I understand that a biodegradable bag will be provided so as to be not too messy for the householder. Does that mean that each household will be issued with a bulk supply of these bags or are they expected to have to wash them out each time.?
The thing is that however this scheme works there is still a lot of rubbish that is going to the landfill and thereby is the problem, because at present no one has control of what goes into those bags that end up in the landfill. That I think though is an issue in itself.

So my last point is regarding the financial aspect to the house holder.
As well as my rates this year increasing by about $ 114 and next year I guess by a similar amount we will have the added cost in 2023 of $134 for the recycling and then in 2024 a further $60 for the food waste which means a total in 2024 of $195 plus no doubt another rate increase. In reality I suppose the cost of the recycling and food waste schemes will just be included in the rates. I estimate that my rates for the year 2024 will be increased by about $320 which is on top of the accumulative effect of the previous two years .
I suppose another way of looking at it would be to increase the general rate by say 1% or whatever it would equate to and say that the kerbside system will be free and it would just come out of the general rates. (tongue in cheek)
Personally I am retired now and just on government super as many others in this town are.
So I would just say that in the future this sort of a scheme or others like it could be a bit of a struggle for many.
I guess with any Improvement there is a cost, but is this really an improvement or just a reaction.
Not an easy problem to deal with and I wish the council all the best in trying to solve it.
Thank you

Further comments

I would like to submit my view on new kerbside recycling.
I am disabled and mobilise on 2 crutches, I am unable to place my regular bin at the gate as I live at the end of a right-of-way in Whanganui East.
I have to use Trashpak who come and fetch their bin when I email to tell them when necessary.
If this service was implimented I would be only to pleased to participate, otherwise i am against paying for it.
